PERTAMINA
HULU ENERGI

CONSOLIDATED ESG REPORT 2025

PT Pertamina Hulu Energi

Executive Summary

PT Pertamina Hulu Energi (PHE) Subholding Upstream continues to strengthen the application of Environmental, Social and Governance (ESG) principles as an integral part of the sustainability of its upstream oil and gas operations.

Environmental management and the achievement of environmental targets are realised through various decarbonisation and energy efficiency programmes, increased utilisation of renewable energy, the conduct of Environmental Impact Assessments (EIA), the implementation of a Biodiversity Action Plan focused on Net Positive Impact (NPI), and conservation programmes. Environmental protection is also realised through Environmental Management System certification across all operational areas and subsidiaries. Environmental management is strengthened through PERCA and PROPER audits, pollution control, waste management using the 4R approach, and monitoring of the environmental performance of suppliers and contractors.

In the social pillar, PHE continues to prioritise safety as a core value in all operational activities. The implementation of the HSSE Policy and Occupational Health and Safety (OHS) Management System certification creates a safe working environment for employees, business partners and contractors. Through the Community Involvement & Development (CID) programme, PHE empowers local communities in the vicinity of the Company's operational areas. PHE continues to foster a working environment that values diversity, equality, inclusion and human rights.

From the governance perspective, sustainability is increasingly integrated into the Company's oversight and decision-making mechanisms. The Sustainability Committee plays a key role in reviewing sustainability strategies, actions and targets, whilst sustainability aspects have also become part of management's performance indicators. The strengthening of a culture of integrity is achieved through the implementation of an Anti-Bribery Management System, governance assessments, a Whistleblowing System (WBS), and various awareness-raising and compliance programmes.

Overall, PHE's ESG performance in 2025 demonstrates a sustained effort to balance operational and business performance with the management of environmental impacts, social protection, and the strengthening of governance. PHE will continue to improve the quality of its ESG management by strengthening decarbonisation, resource efficiency, biodiversity protection, operational safety, respect for human rights, community empowerment, and the consistent application of governance and integrity across all Subholding Upstream.

About This Report

PHE's 2025 Consolidated ESG Report highlights the company and its subsidiaries' ongoing commitment and progress in integrating environmental, social and governance (ESG) principles across all business operations. This report has been prepared to disclose material topics in line with the ESG rating requirements of MSCI for the Oil & Gas Exploration & Production industry segment. Within this classification, we have identified seven key issues covering carbon emissions, toxic emissions and waste, biodiversity and land use, health and safety, community relations, corporate behaviour, and corporate governance.

Scope of the Report

The disclosures contained in this report cover the parent company, PT Pertamina Hulu Energi (PHE), and all its subsidiaries. PHE has subsidiaries in the upstream oil and gas sector, which are divided into five regional companies (PT Pertamina Hulu Rokan – Sumatra, PT Pertamina EP – Java, PT Pertamina Hulu Indonesia – Kalimantan, PT Pertamina EP Cepu – Eastern Indonesia, PT Pertamina Internasional EP – International), and three subsidiaries (PT Drilling Services Indonesia (PDSI), PT Elnusa Tbk., and PT Badak NGL). In this report, PHE and all its subsidiaries are collectively referred to as the "Company", "PHE", or "PHE Subholding Upstream". The reporting period is from 1 January 2025 to 31 December 2025, except for the profile sections of the Board of Commissioners, Board of Directors, and Committees, which present information based on the members in office at the time of this report's publication.

Restatement

Information is restated when we obtain data that is more accurate than that for the previous period. Any information that has been restated from the Company's disclosures in the previous period will be marked with an asterisk (*) and accompanied by an explanatory note below the relevant data.

Foreword

Dear readers,

Pertamina Hulu Energi (PHE) recognizes sustainability as an integral part of long-term business continuity and growth. As Pertamina's Subholding Upstream, PHE plays a strategic role in supporting national energy security while ensuring that its operations are conducted responsibly, with due consideration of environmental, social, and governance (ESG) aspects.

This Consolidated ESG Report provides an overview of PHE's ESG management across the Subholding Upstream. It presents the Company's policies and commitments, management of material ESG issues, key initiatives, and progress in ESG performance, drawing on information consolidated from various functions and entities across the Subholding Upstream.

In preparing this Report, PHE continues to enhance the quality and consistency of ESG information through the alignment of data, documentation, policies, and supporting evidence of implementation. These efforts reflect PHE's commitment to transparency and accountability, while ensuring that the ESG information disclosed is consistent, traceable, and well-substantiated.

We extend our highest appreciation to all officers and stakeholders for their support and the partnerships we have forged. Through this report, we hope that the information provided offers a transparent overview of PHE's performance and sustainability journey, whilst also serving as a means to foster constructive dialogue with stakeholders. We remain committed to enhancing the quality of our ESG management and disclosure as part of our efforts to create long-term value for the Company, the community, the environment, and the nation of Indonesia.

Sincerely,

SIGNED

Sunaryanto
Chief Executive Officer

PT Pertamina Hulu Energi

Environmental Commitment and Performance

.

1.1 Mitigating Climate Change

Sustainability Committee

Climate change governance forms an integral part of sustainability governance. PHE has a Sustainability Committee that is responsible for providing direction and overseeing the implementation of sustainability strategies, roadmaps, policies, and initiatives, including risks and opportunities related to climate change. This committee is chaired by the Chief Executive Officer and comprises seven board members and representatives from various functions.

Committee	Sustainability Aspect
Director of Strategic Planning, Portfolio & Commercial	• Policies, roadmaps and long-term strategies • Materiality sustainability focus • Business strategy, Marginal Abatement Cost Curve (MACC) • Health and safety
Director of Development & Production	• Decarbonisation & green projects • Climate change • Well integrity and management systems • Offshore well management • Health and safety • Prevention of major accidents • Process safety
Director of Exploration	• Minimising the environmental footprints in exploration activities • Health and safety
Director of Human Resources & Business Support	• Diversity • Human rights • Inclusivity • Employee recruitment, retention and development • Cyber security • Green procurement • Social supplier standards • Health and safety
Director of Finance	• Sustainable financing • Sustainability budget tagging • Health and safety
Director of Investment and Business Development	• Green mergers and acquisitions • Low-carbon business and renewable energy development • Health and safety
Director of Risk Management	• Climate-related risk management • Corporate risk management • Health and safety

Committee	Sustainability Aspect
Corporate Secretary	• Community involvement & development • Corporate governance • Corporate ethics • Stakeholder relations, communication strategy • Land formalities • Health and safety
VP HSSE	• Climate change • Environment • Biodiversity • Water scarcity • Effluent • Waste management • Emergency response, land closure & rehabilitation • Health & safety • Prevention of major accidents • Security
VP Upstream Innovation	• Reorienting green innovation & research • Integrated CCUS/CCS roadmap & strategy • Climate change
Chief Audit Executive	• Business assurance & corporate ethics • Follow up on the whistleblowing system

Greenhouse Gas Emissions

The company has measured absolute emissions under Scopes 1, 2 and 3. The measurement and calculation parameters refer to Pertamina Standard No. A04-005/S00000/2022-S9 concerning Guidelines for Measuring, Calculating, Reporting, and Verifying Greenhouse Gas Emissions in accordance with Ministry of Environment Regulation No. 12 of 2012, expressed in tons of CO_2eq. The base year used by PHE Subholding Upstream is 2021 with emission amounting to 15,427 thousand tonnes of CO_2eq (for Scope 1 and Scope 2), which was recalculated in 2025 based on organizational changes within PHE, including the integration of the Rokan Zone and PT Badak NGL on a full-year basis, as well as the divestment of assets such as BOB Pertamina Bumi Siak Pusako, PHE Kampar, and PHE Siak. The recalculation of the base year emissions was intended to ensure that emission data remain consistent and comparable across years. The calculation of GHG emission intensity also follows the GHG Protocol and is carried out using the operational control approach. Scope 1, 2 and 3 emissions have been calculated to cover 100% of working areas, including operational working areas in 5 Regions and 3 subsidiaries.

Scope 1 Emissions

Scope 1 emissions stem from oil and gas production activities and fuel consumption. Biogenic carbon emissions are already included in the scope of GHG emissions calculations, which cover internal and external combustion, flaring, venting and process emissions, as well as fugitive emissions.

Emission Source	2025	2024*	2023*	2022*	2021*
Internal and External Combustion (tonnes of CO_2eq)	7,120,354.79	7,349,405.94	7,858,454.56	7,937,233.17	7,827,039.17

Emission Source	2025	2024*	2023*	2022*	2021*
Routine Flaring (tonnes of CO_2eq)	1,734,035.91	1,838,699.16	1,924,897.08	2,008,168.70	1,918,323.23
Non-routine Flaring (tonnes of CO_2eq)	325,368.54	298,291.57	298,904.57	315,061.22	510,087.18
Safety Flaring (tonnes of CO_2eq)	451,017.33	285,663.09	341,980.01	287,509.41	324,214.93
Venting and Process (tonnes of CO_2eq)	3,287,048.11	3,369,706.56	1,989,920.49	1,992,527.25	1,986,850.86
Fugitive Emissions (tonnes of CO_2eq)	309,605.72	771,283.79	713,653.26	716,366.10	688,963.99
Scope 1 Emissions (tonnes of CO_2eq)	**13,227,430.40**	**13,913,050.13**	**13,127,809.97**	**13,256,865.85**	**13,255,479.37**

Notes:

*The restatement of emissions calculations within the Subholding Upstream was due to a recalculation of the 2021 baseline resulting from asset acquisitions and disposals, reinventory, calculation tool refinement, adjustment to calculation units, and updates to emission factors and global warming potential (GWP) values.

Scope 2 Emissions

Scope 2 GHG emissions arise from the purchase of electricity from a third party. In 2025, some emissions were reported through a market-based approach (1,869,954.86 tonnes of CO_2eq), and the remaining were reported through a location-based approach (340,277.39 tonnes of CO_2eq). Emissions in 2021 until 2024 were fully calculated using a location-based approach.

	2025	*2024	*2023	*2022	*2021
Scope 2 Emissions (tonnes of CO_2eq)	2,210,232.25	2,426,997.52	2,222,579.97	2,063,476.65	2,171,579.92

Notes:

*The restatement of emissions calculations within the Subholding Upstream was due to a recalculation of the 2021 baseline resulting from asset acquisitions and disposals, reinventory, calculation tool refinement, adjustment in calculation units, and updates to emission factors and global warming potential (GWP) values.

Scope 3 Emissions

The calculation of Scope 3 GHG emissions covers categories 3, 5, 10 and 11, which are considered to have significant impacts in the upstream oil and gas industry. Since Scope 3 GHG emissions were only first calculated in 2023, PHE Subholding Upstream has not yet established a baseline emission for Scope 3. The total volume of Scope 3 GHG emissions increased by 15.14% from 2024, which was 3,280,914.21 tonnes CO_2eq. The increase was driven by higher emissions in Categories 10 and 11 in line with the growth in sales volumes, both for products to be further processed by third parties and for products intended for end consumers.

Emission Source	2025	2024	2023
Category 3 Fuel and Energy-Related Activities (tonnes of CO_2eq)	174,541.34	199,341.97	578,177.15
Category 5 Waste Generated in Operations (tonnes of CO_2eq)	20,342.50	28,306.45	38,498.45
Total Scope 3 Upstream Emissions (tonnes of CO_2eq)	**194,883.84**	**227,648.42**	**616,675.60**
Category 10 Processing of Sold Products (tonnes of CO_2eq)	2,628,367.97	2,129,036	2,498,078.21
Category 11 Use of Sold Products (tonnes of CO_2eq)	954,481.50	924,229.79	637,801.91
Total Scope 3 Downstream Emissions (tonnes of CO_2eq)	**3,582,849.47**	**3,053,265.79**	**3,135,880.12**
Total Scope 3 Emissions (tonnes of CO_2eq)	**3,777,733.31**	**3,280,914.21**	**3,752,555.72**

GHG Emission Intensity

GHG emission intensities per revenue were calculated using Scope 1 and 2 emission values covering all working areas. Emission intensities per revenue within the last 5 years are shown in the table below.

Component	2025	2024	2023	2022	2021
Total Scope 1 GHG Emissions (tonnes of CO_2eq)	13,227,430.40	13,913,050.13	13,127,809.97	13,256,865.85	13,255,479.37
Total Scope 2 GHG Emissions (tonnes of CO_2eq)	2,210,232.25	2,426,997.52	2,222,579.97	2,063,476.65	2,171,579.92
Total Scope 1 & 2 GHG Emissions (tonnes of CO_2eq)	15,437,662.64	16,340,047.64	15,350,389.94	15,320,342.50	15,427,059.29
Total Revenue (Million USD)	13,819.62	14,330.34	14,568.38	16,183.40	11,740.08
Emission Intensity per Revenue (tonnes of CO_2eq/ million USD)	**1,117.08**	**1,140.24**	**1,053.68**	**946.67**	**1,314.05**

For the calculation of emission intensity per production, the total oil and gas production used represents gross-up production. Total Scope 1 and 2 emissions exclude emissions from PT Badak NGL, PT PDSI, and PT Elnusa Tbk. This is because these three entities are non-exploration and production entities that do not generate oil and gas production convertible into Barrel of Oil Equivalent (BOE); therefore, they are not included within the scope of the gross up production calculation. Emission intensities per production are shown in the table below.

Component	2025	2024*	2023*	2022*	2021*
Total Scope 1 GHG Emissions (tonnes of CO_2eq)	10,915,765.77	11,549,269.43	10,256,134.72	10,554,131.17	10,720,411.36
Total Scope 2 GHG Emissions (tonnes of CO_2eq)	2,176,844.58	2,401,539.17	2,205,952.12	2,053,146.00	2,162,123.34
Total Scope 1 & 2 GHG Emissions (tonnes of CO_2eq)	13,092,610,35	13,950,808.60	12,462,086.84	12,607,277.17	12,882,534.70
Total Oil and Gas Production (BOE)	270,075,369.90	277,980,370.37	287,052,761.56	282,326,988.99	248,234,651.14
Emission Intensity per Production (tonnes of CO_2eq/ BOE)	**0.049**	**0.050**	**0.043**	**0.045**	**0.052**

Notes:

*The restatement of emissions calculations within the Subholding Upstream was due to a recalculation of the 2021 baseline resulting from asset acquisitions and disposals, reinventory, calculation tool refinement, adjustment to calculation units, and updates to emission factors and global warming potential (GWP) values.

Target and Achievement of GHG Emission Reduction

As part of its efforts to reduce its environmental impact, PHE has set a target to reduce Scope 1 and 2 carbon emissions by 32% by 2030, in line with national targets to support the Enhanced Nationally Determined Contribution (NDC) emissions reduction target and the interim energy sector target of 12.5% by 2030. PHE has designated 2021 as the baseline year, when the company first calculated its Scope 1 and 2 emissions. Subsequently, PHE developed a Business-as-Usual (BaU) emissions projection and adopted this as the reference for its absolute reduction target. The 2030 BaU emissions figure of 20,493,169.95 tonnes of CO_2e was set as the baseline for the interim target, with a planned reduction of 32%, resulting in a 2030 emissions target of 13,935,355.56 tonnes of CO_2e. Our performance in 2025 was on track with this target, with total Scope 1 and 2 emissions remaining 24.67% lower than the 2030 BaU value.

Target for 2030

32%

Reduction from 2030 business-as-usual value

Achievement in 2025

24.67%

Below 2030 business-as-usual value

With regard to long-term emission reduction targets, PHE will use the 2060 business-as-usual (BaU) emissions figure as a baseline, with the reduction determined by the difference between BaU emissions and the emission levels following decarbonisation. Although the 2060 BaU projections have not yet been finalised, PHE has committed to achieving net-zero GHG emissions for Scopes 1 and 2 by 2060 or sooner. These emission reduction targets – both interim and long-term – are aligned with the phased targets set by the parent company, PT Pertamina (Persero), and will be implemented consistently across all operational working areas and subsidiaries.

In line with our emission reduction target, we have established annual decarbonization targets. These targets are primarily achieved through operational decarbonization - energy efficiency, electrification, renewable power, flare & vent reduction -, with additional contributions from CCS/CCUS starting from 2029. Throughout 2025, there were 184 decarbonisation programmes, achieving emission reductions of 1,619.56 thousand tonnes of CO_2eq – 138% of the target.

Scope 1 & 2 Decarbonization Achievement (tonnes of CO_2eq)

2025

137.6%

Achievement Percentage

Target : 1,177,000 tCO_2eq

Achievement : 1,619,564 tCO_2eq

2024

150.4%

Achievement Percentage

Target : 789,180 tCO_2eq

Achievement : 1,186,870 tCO_2eq

2023

124.3%

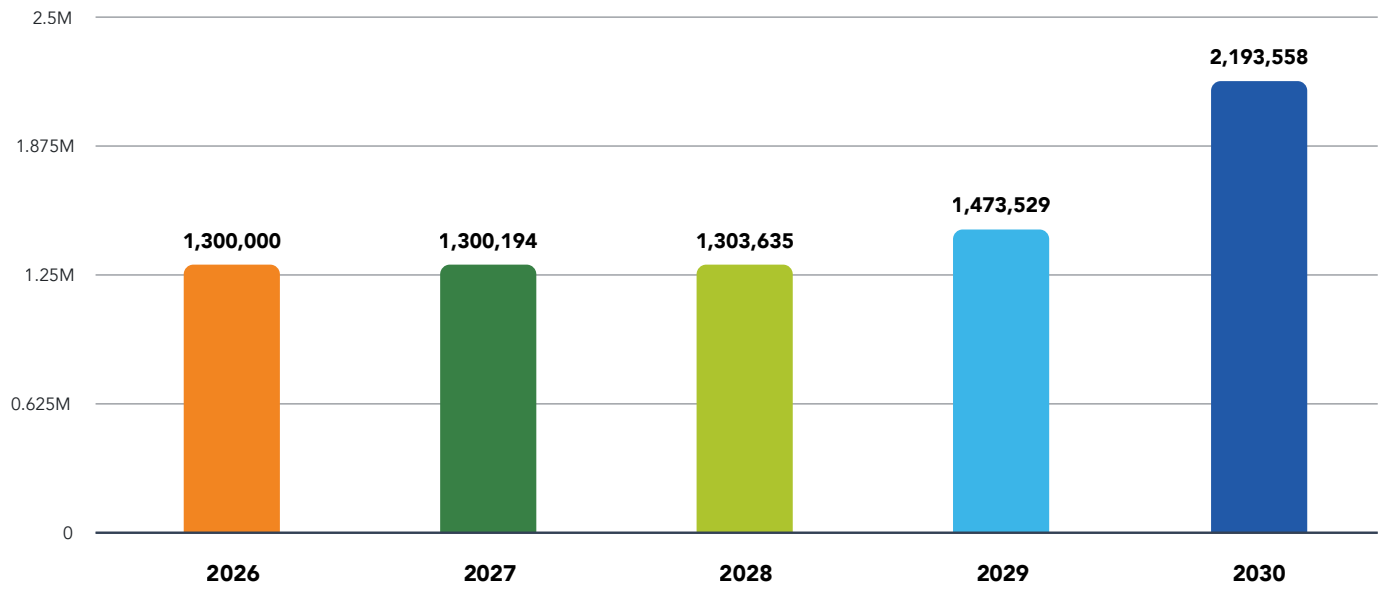

Achievement Percentage

Target : 701,976 tCO_2eq

Achievement : 872,490 tCO_2eq

Through PHE's Company Long-Term Plan (RJPP), we have established annual decarbonization targets until 2030 as shown in the graph below.

Scope 1 & 2 Decarbonization Targets (tonnes of CO_2eq)

Energy Use

PHE manages its energy requirements by prioritising an approach centred on energy efficiency and the use of new and renewable energy (NRE) sources with lower carbon emissions. Energy management efforts are carried out through the optimisation and improvement of energy efficiency, accompanied by regular energy audits. The commitment to energy efficiency is outlined in the Sustainability Policy and HSSE Policy, while energy audits are governed by Minister of Energy and Mineral Resources Regulation No. 14 of 2012, which was updated through Minister of Energy and Mineral Resources Regulation No. 8 of 2025 concerning Energy Management. In accordance with these regulations, industrial entities with annual energy consumption of ≥6,000 TOE are required to conduct energy audits. PHE has completed energy audits for 100% of its working areas that meet this regulatory threshold, namely PHE ONWJ, PHM, PEP Donggi Matindok, JOB Tomori, and PT Badak NGL. Energy audits are conducted every three years by independent external auditors with the required competencies and certifications, referring to the principles and requirements of ISO 50001 on energy management systems.

Total Energy Consumption	**52,299,915.50**	**54,419,694.99**	**56,551,959.70**	**59,491,289.51**	**51,496,079.31**
Percentage of Renewable Energy from Total Consumption	**6.55%**	**6.15%**	**5.19%**	**3.36%**	**2.97%**

Note:
*The restatement of emissions calculations within the Subholding Upstream was due to a recalculation of the 2021 baseline resulting from asset acquisitions and disposals, reinventory, calculation tool refinement, adjustment to calculation units, and updates to emission factors and global warming potential (GWP) values.

Energy Intensity

Energy consumption intensity relates to oil and gas production activities from non-renewable energy sources. Energy consumption intensity is calculated as the energy, in GJ, required for oil and gas production per barrel of oil equivalent (BOE). Energy intensity is calculated excluding the total energy figures from PT PDSI, PT Elnusa Tbk and PT Badak NGL, as their production figures are not converted to BOE.

In GJ/BOE

2025	2024*	2023*	2022*	2021*
0.51	0.52	0.50	0.57	0.56

Note:
*The restatement of emissions calculations within the Subholding Upstream was due to a recalculation of the 2021 baseline resulting from asset acquisitions and disposals, reinventory, calculation tool refinement, adjustment to calculation units, and updates to emission factors and global warming potential (GWP) values.

Target on Energy Use

PHE aims to increase the share of renewable energy to 2% of total energy consumption by 2030. Moreover, in line with national targets, PHE has set targets to reduce energy intensity by 1% per year from 2025 onwards.

Greenhouse Gas Emission Reduction Efforts

Reduction of Energy Consumption

Energy efficiency calculations are carried out on an annual basis, based on the difference between actual energy consumption under the energy-saving programme and the estimated energy consumption without the programme (the 'business-as-usual' scenario). The base year or baseline used as the basis for calculating the reduction in energy consumption is the same as the base year for emissions, set as 2021.

The total energy reduction for 2025 amounts to 6,725,170.97 MWh, equivalent to 24,210.62 GJ. This figure is 51.69% higher than the energy reduction achieved in 2024, which stood at 4,433,442.25 MWh or equivalent to 15,960.39 GJ. Some of the energy efficiency programmes that have contributed a huge portion of this energy consumption reduction are shown in the table below.

No	Program	Working Area	Region	Realization (MWh)	Emission Reduction (tonnes of CO2eq)
1	Efficiency in fuel gas usage through optimisation of gas turbine operations (reduction in fuel gas consumption by 14 MMSCFD, from 40 MMSCFD to 26 MMSCFD)	PHE OSES	Region 2	2,532,698.17	422,999.38
2	Installation of electrical wiring for 3 wells at the Sungai Gelam field	PEP Jambi	Region 1	572,266.00	1,037.38
3	Automation of the refrigerant compressor anti-surge control system to reduce steam consumption during low LNG production	PT Badak NGL	PT Badak NGL	510,705.99	87,262.51
4	Savings in gas fuel consumption from one power generation unit by optimising reactive power generation (MVAR)	PHR	Region 1	473,695.73	87,710.27
5	Electricity Supply with PT PLN's Platinum Premium Service and Extra Amenities Service	PEP Lirik	Region 1	236,270.10	12,022.23

6	Optimalization of Own Used Gas	PEP Sangatta	Region 3	201,839.03	43,316.04
7	Implementation of Load Shedding for Power Generation at Donggi and Matindok Central Processing Plants (CPP)	PEP DMF	Region 4	185,644.85	36,340.81

In addition to the above initiatives, PHE has taken several steps to reduce energy consumption in the long term as shown in the table below.

No	Program	Working Area	Realization (tonnes of CO2eq)
1	Optimization of lifting frequency at loading terminal	PEP Bunyu, PT Badak NGL	19,239.25
2	Optimization of marine fleet transportation route and frequency	PHKT, PHE WMO	9,804.84
3	Replacement of low-efficiency or obsolete equipment with higher-efficiency equipment	PHKT, PEP Cepu, PT Elnusa Tbk	3,969.43
4	Establishment of transparent roofing and ventilators in warehouse	PT Elnusa Tbk	1,686.32
5	Substitution of fluorescent and halogen lamps with LED lights	PHE Jambi Merang, MLN Algeria, PT PDSI, PT Elnusa Tbk	1,284.71
6	Optimization of car passenger load	PEP Donggi Matindok	72.36
7	Reduction of electric generator running test duration and frequency	PT Elnusa Tbk, PHE ONWJ	24.82
8	Implementation of motion detectors to reduce energy needs for lighting	PT Elnusa Tbk	0.18
9	Shutting down of lights during break time	PT Elnusa Tbk	0.12

Utilization of Flare Gas

PHE continues to strive to achieve zero routine flaring by 2030, through programmes to utilise flare gas at all routine flaring points that still have the potential to be utilised. By 2025, the flare utilisation programme is projected to contribute to an emissions reduction of 274,895.62 tonnes of CO_2eq, spread across 95 routine

flaring points that have undergone technical assessments and have flare reduction programmes in place. One example is the installation of a load balancer to activate the gas engine generator at Sungai Gelam power station, resulting in a saving of 0.90 m^3 of diesel per day. In line with the principle of compliance, all routine flaring points within PHE's working areas have met regulatory requirements regarding half-yearly flaring reporting, in accordance with the regulations set out in Ministry of Energy and Mineral Resources Regulation No. 17 of 2021. Nevertheless, we continue to monitor flare gas emissions via the PHE Zero Routine Flaring dashboard.

Low-Carbon Energy

PHE supports the increase of renewable energy consumption through 2 categories of key initiatives:

- **Low-carbon heat:**The use of biodiesel (B40) as fuel especially for the marine fleet contributed 13.7%, or 221,914.53 tonnes of CO_2eq, while supporting the reduction of fossil fuel consumption.
- **Low-carbon power:** The utilization of solar panels as renewable energy source and electrification of power source using grid electricity contributed 3.9%, or 62,701.32 tonnes CO_2eq, to emission reductions.

Several low-carbon heat and low-carbon power initiatives which are among the top contributors of emission reductions are shown in the following table.

No	Program	Working Area	Region	Realization (tonnes of CO_2eq)
		Low-Carbon Heat		
1	Use of biosolar as fuel for marine fleet	PHM	Region 3	95,320.96
2	Naturalization of marine fuel with biodiesel	PHE OSES	Region 3	42,737.99
3	Efficiency of marine fuel and conversion to biodiesel	PHE ONWJ	Region 2	29,114.81
4	Conversion of solar diesel fuel to biodiesel for operational activities and marine transportation	PHKT	Region 3	15,160.49
5	Switching of marine fleet fuel from diesel to biodiesel	PEP Poleng & PHE WMO	Region 4	6,971.78
		Low-Carbon Power		
1	Operation of solar power plants in partnership with Pertamina Power Indonesia at Duri, Dumai, and Rumbai	PHR Rokan	Region 1	28,066.53
2	Installation of solar panels for energy supply	MLN Algeria	Region 5	8,804.87

3	Implementation of solar power plants at Pabelokan	PHE OSES	Region 3	655.46
4	Solar cell light tower at rig site	PT PDSI	PDSI	568.00
5	Installation of movable solar panel at IDTC	PT PDSI	PDSI	408.37

Geologic Hydrogen Exploration

As part of PHE's concrete efforts to support energy self-sufficiency, through the New Venture Exploration Directorate, PHE is developing the exploration potential for geological hydrogen in Indonesia, which is a clean, carbon-emission-free energy source. PHE is proactively taking a leading role in driving the development of the hydrogen ecosystem through various strategic initiatives, including applying for geological hydrogen operatorship status with PT Pertamina (Persero), refining business classifications and regulations (the Indonesian Standard Classification of Economic Activities, KBLI) under codes 06201 – Natural Gas Mining – to the Central Statistics Agency (BPS), and collaborating with the Directorate General of Oil and Gas to draft specific regulations for hydrogen.

The year 2025 marks a significant milestone with the commencement of PHE's first geological hydrogen exploration project in Ampana, Central Sulawesi, carried out through technical cooperation with Geology Survey Center (PSG) under a three-year Cooperation Agreement (PKS) effective from November 2024. The project, running from July to December 2025, aims to update our understanding of geological hydrogen systems and identify prospects through Audio Magnetotelluric and Magnetotelluric (AMT/MT) surveys, as well as laboratory analysis of water, gas and rock samples.

Remote Operations, Robotics & Autonomous (RORA) Technology for Low-Carbon Surveying

RORA technology aims to automate geospatial mapping and identification using UAV/drone technology—including camera and LiDAR sensors—to replace conventional ground-based mapping methods, as well as utilising Geo-AI (artificial intelligence), geo-tagging, machine learning and others. PHE has implemented 5 RORA initiatives, namely:

1. Unmanned aerial vehicles (UAVs) for topographic mapping in Region 4, Zone 13, Donggi Matindok Field
    - A 98.35% increase in the efficiency of mapping survey activities (reduced from 2,421 man-days to 40 man-days)
    - A 99.83% reduction in the carbon footprint (equivalent to 20,082.12 kg of CO_2)
    - Cost savings of 98.29% (equivalent to 1.2 billion Rupiah)
2. Unmanned surface vehicle (USV) in Region 3, Zone 8, Mahakam Field, also serving to support the Innovation Geophysics study (shallow-water passive seismic)
3. Real-time kinematic positioning – global navigation satellite systems (RTK GNSS) for topographic mapping in Region 2, Zone 7, Subang Field
4. Development and implementation of the XD One Map application utilising geo-AI/artificial intelligence, geo-tagging and machine learning technologies for:
    - The HSSE One Map GRS (Geographical Response Strategy) programme forms part of the 12 HSSE Flagship Programmes, in collaboration with the HSSE departments of PT Pertamina Persero and the Upstream Subholding;

- Development of 11 (eleven) HSSE Database Applications (FERRAT, FERMOS, SRA, ERA, MERP), in collaboration with HSSE PT Pertamina Persero and HSSE Upstream Subholding;
- The Licensing Management Programme, in collaboration with the Corporate Secretary function at PT Pertamina Persero;
- The Emergency Response & Crisis Management (ERCM) Programme, in collaboration with the Upstream HSSE Subholding;
- Pipeline Risk Management Programme, in collaboration with the Risk Management function of PT Pertamina (Persero);

5. Providing assistance with methane gas measurements for Region 4 Zone 13 Tomori, as part of a joint study between JOGMEC and the HSSE function of PT Pertamina (Persero), with the aim of successfully implementing The Oil & Gas Methane Partnership 2.0 (OGMP 2.0) within the Upstream Subholding/ Pertamina.

The current implementation of RORA reduces carbon emissions by up to 96% through the use of lithium batteries, which replace fossil fuels.

Carbon Capture and Storage/Carbon Capture, Utilization, and Storage (CCS/CCUS)

In line with the energy transition and decarbonization agenda, PHE has implemented various initiatives and innovations to support environmentally friendly business development. One such initiative is the deployment of CCS/CCUS technology, which is part of PERTAMINA Group's Strategic Initiatives to support the achievement of Net-Zero Emissions (NZE) by 2060 or sooner. Although large-scale greenhouse gas (GHG) emission removal has not yet been implemented, PHE continues to conduct studies on the potential development of CCS/ CCUS business clusters with CO_2eq injection capacity of up to 6.0 million metric tonnes per annum (MTPA).

Based on these studies, the PHE Subholding Upstream currently has potential carbon storage capacity in saline aquifers and depleted oil/gas fields distributed across Indonesia. PHE is currently developing two CCS Hubs and several CCS Satellites in collaboration with strategic partners. In May 2026, PHE, together with ExxonMobil Low Carbon Solutions Indonesia Limited, SK Innovation, and SK Earthon, signed a Joint Study Agreement (JSA) to explore the development of cross-border CCS projects and the commercialization of the Asri Basin CCS Hub.

To date, PHE has conducted trial injections of 3,590 tonnes of CO_2eq in several fields as part of CCUS technology studies using the enhanced oil recovery (EOR) mechanism. This approach is expected to be applied in other Pertamina fields as a decarbonization measure and to support production enhancement. In partnership with JOGMEC and JAPEX, PHE has carried out studies in Jatibarang CO_2 EOR (CCUS) and Sukowati CCUS sites.

Study/Project	Status	Potential Maximum Carbon Storage Capacity (million tonnes of CO_2eq)
CCS Central Sumatera Basin	Study	85
BECCS South Sumatera Basin	Study	*29*
CCS Asri Basin	Pilot	1,100

Study/Project	Status	Potential Maximum Carbon Storage Capacity (million tonnes of CO_2eq)
CCS Gundih	Study	70
CCS East Kalimantan	Study	270
CCS Central Sulawesi	Study	1,200
CCS Subang	Study	89
CCS Masela	Study	3,500
CCS ONWJ	Study	371
CCS Bambu Hijau	Study	25.7
EOR Ramba	Study	9.1
EOR Jatibarang	Pilot	0.146
EOR Sukowati	Pilot	1

Emission Reduction with Microalgae (Nature-Based Solution)

PHE Subholding Upstream has conducted trials of microalgae-based technology as a solution for reducing emissions, achieving a maximum CO_2 absorption capacity of 0.11 MMscfd (12,000 litres of microalgae). This study was carried out at the Subang Gathering Station (SP), Pertamina EP Region 2 Zone 7 Subang Area, to absorb emissions from vented gas. This technology utilises the ability of microalgae to absorb carbon resulting from the gas production process, thereby enabling emissions that would previously have been released into the atmosphere to be converted into value-added biomass. The biomass produced also has the potential to be used as a soil enhancer to support land bioremediation programmes.

1.2 Protecting Biodiversity and Land

Policies on Biodiversity and Natural Resources Management

PHE affirms its commitment to biodiversity protection by implementing Sustainability Policy. PHE manages and mitigates the impacts of its projects and activities on biodiversity to achieve a Net Positive Impact (NPI) by avoiding operational activities in high-biodiversity areas and integrating biodiversity aspects into project planning and operations. PHE is committed to conducting post-operational land rehabilitation and reclamation to restore ecosystems, minimize negative impacts, and maximize benefits, as well as allocating adequate funds for operational closure and rehabilitation.

PHE respects the rights of the communities in which it operates, such as by avoiding disruption to land use and traditional ways of life. This commitment is also reaffirmed in its Human Rights Policy, which sets out its commitment to respecting the rights of indigenous peoples in the areas affected by the Company's operational activities and assets. This includes recognizing indigenous peoples' rights to land and resources, as well as their traditional practices and customs.

Through its Health, Safety, Security & Environment (HSSE) Policy, PHE is committed to managing natural resources responsibly. This is achieved through energy efficiency, water optimisation and conservation, and circular economy. The Sustainability Policy, Human Rights Policy, and HSSE Policy must be implemented by PHE, all subsidiaries, and business partners.

In its procurement activities, PHE Subholding Upstream implements Green Procurement Policy. The company prioritizes suppliers, contractors and business partners who use environmentally friendly, non-toxic materials and recyclable products, comply with applicable environmental standards, and use natural resources responsibly. PHE also has Commitment of Environmental, Social, & Governance (ESG) Management Implementation in Goods and Services Procurement Activities. This formal commitment states that the Company supports environmentally friendly changes in all activities and conducts its operations in a way that has positive impacts on the environment.

Biodiversity Target

The Company strives to conserve endangered flora and fauna based on the IUCN Red List and develops a Biodiversity Action Plan (BAP) oriented towards achieving 100% NPI by 2030 for new facilities that intersect with or are located within significant impact areas after 2022. NPI is a target whereby the positive measures taken to prevent, reduce, or mitigate the project's impacts on biodiversity outweigh the negative impacts. Through the implementation of the No Net Loss principle with an NPI target, PHE Subholding Upstream affirms its commitment to not only avoiding negative impacts but also actively contributing to ecosystem conservation efforts. This target applies across all working areas and serves as a comprehensive framework for developing the BAP.

To assess whether a facility is located within a significantly impacted area or not, the Company carries out a Preliminary Assessment of the Biodiversity Action Plan (Pra-BAP) as set out in the Pra-BAP Standard Operating Procedure (SOP Pra-BAP). The Pra-BAP includes an analysis of ecologically sensitive areas, such as Key Biodiversity Areas (KBA), Important Bird and Biodiversity Areas (IBA) and Global Forest Watch (GWF). Subsequently, the BAP is prepared with reference to the Biodiversity Action Plan Guidelines. The BAP contains a mitigation hierarchy analysis to identify prioritised actions for achieving biodiversity management objectives and targets, covering avoidance (preventing negative impacts), minimisation (reducing negative impacts), restoration (remedying damage), and offsetting (compensation through conservation measures in areas not affected by the project). In 2025, PHE realized 100% of new facilities that have implemented a BAP.

Impact Risk Assessment on Biodiversity

Before expanding into new locations or developing new infrastructure, PHE always conducts a comprehensive assessment of the potential impacts on the surrounding communities and environment, as a measure of compliance with the obligation to prepare an Environmental Impact Assessment (EIA/AMDAL) in accordance with Law No. 32 of 2009 on Environmental Protection and Management, as amended by the Omnibus Law on Job Creation, as well as Government Regulation No. 22 of 2021 on the Implementation of Environmental Protection and Management. The careful consideration of environmental impacts is also incorporated into every infrastructure development plan through EIA approved by the Ministry of Environment/Environmental Regulatory Body (KLH/BPLH), as well as preliminary studies of regional and spatial planning to ensure alignment with land-use and environmental protection policies. All of PHE's operational sites (100%) have obtained environmental approval before operational activities began, in accordance with applicable regulations.

As part of the EIA, PHE prepares the Environmental Management and Monitoring Plan (RKL-RPL) across all working sites. The results of management and monitoring activities are documented in the Environmental Permit Implementation Report. PHE collaborates with numerous experts and academics in the field of biodiversity from universities to carry out risk and impact assessments relating to biodiversity, as well as to monitor the implementation of the RKL-RPL. Monitoring activity is done every 6 months, encompassing:

- Surveys at the project site and surrounding areas
- Sampling and in-situ measurements for components such as air quality, water quality, soil, aquatic biota, noise, and socio-economic aspects
- Observations of employee and community activities around the site
- Laboratory analysis of environmental parameters established for air quality, water quality, soil quality, and aquatic biota
- Evaluation of trends (trend analysis), critical levels, and compliance levels
- Designing improvements for environmental impact management

The environmental parameters tested, among others, include:

- Total suspended particulate (TSP) levels in ambient air
- Concentrations of particulate matter (PM), SO_2, NO_2, and other pollutants in ambient air
- Concentrations of SO_2, NOx, CO, and VOCs, as well as air opacity in the vicinity of emission sources such as gas turbines and flare stacks
- Total suspended solids (TSS) levels in river water
- Concentrations of chemical oxygen demand (COD) and phenols in produced water
- Heavy metal content, such as mercury, arsenic and chromium, in sludge waste
- Sedimentation at drilling sites in water bodies, including oil content
- Number of individuals and abundance levels of animal species in ecosystem

Initiatives to Minimize Disturbances

PHE has implemented measures to minimize disruption to the environment and biodiversity within 100% of operational areas, as set out in the Environmental Impact Assessment (EIA) and the Biodiversity Action Plan (BAP). PHE has developed BAPs for 8 operational working areas which are PEP Region 2 Zone 7 Jatibarang Field, JOB Pertamina-Medco E&P Tomori Sulawesi, PEP Donggi Matindok Field, PEP Cepu Region 4 Zone 12 Jambaran Tiung Biru Field, PHE ONWJ Kabupaten Karawang, PHR Pendopo Field, PHR Duri Steam Flood (DSF) Field and Talang Forest, and Pertamina Hulu Sanga Sanga. These initiatives include the following.

- Project planning that avoids key foraging areas and minimises the area of land cleared
- Selection of alternative routes or locations that do not disrupt the movement patterns of Sumatran elephants in equipment mobilisation plans
- Levelling and compacting the ground to reduce slope gradients and the susceptibility of the soil to erosion
- Application of low-impact seismic technology and operation of air guns while ensuring that no marine mammals are in the vicinity
- Dispersal of marine mammals and sea turtles observed at the drilling site; if a mammal or sea turtle is observed at close range, drilling will be conducted at a low rotation rate, and operations will be paused for approximately 20 minutes until the animal leaves
- Use of low-noise equipment or the use of sound dampeners to reduce noise at the project site
- Installation of warning signs indicating the maximum permitted vehicle speed to reduce the risk of accidents involving wildlife
- Installation of lighting on drilling rigs to prevent collisions with birds flying near these structures
- For construction areas requiring lighting at night, lights will only be used when necessary and will be directed towards the work area and away from habitat areas where possible
- Construction of drainage systems and retention ponds within the project area to prevent surface runoff and to collect oil spills or other contaminants
- Restoration of wildlife corridors that have been cut off or disrupted
- Planting of flora identified at the project site or other flora with higher biodiversity value
- Planting of trees around wells to stabilise the soil in the drilling area
- Reforestation prioritising the planting of natural food sources for Sumatran elephants
- Establishment of an arboretum and provision of food sources and shelter for wildlife
- Construction of green open spaces or green belts around the well pad and along the operational pipeline route
- Construction of retention ponds or drinking pools for wildlife with natural designs
- Land clearance taking into account wildlife roaming routes and habitat
- Reinforcement of boundary fences and/or the addition of elephant trenches to prevent conflict.
- Development of guidelines for anchorage and operational shipping lanes that do not pass through coral reef areas
- Construction of rigs and pipelines whilst taking into account the conservation of coral reef ecosystems

Furthermore, PHE Subholding Upstream monitors changes in the local ecosystem through the Action Plan of Biodiversity Action Plan (BAP) monitoring, conducted annually with quarterly realization tracking (Q1–Q4) across all working areas that have established a BAP, capturing changes in impacted flora and fauna species populations and their conservation status against the IUCN Red List.

Land Management

Land management at PHE Subholding Upstream takes into account ecological characteristics, the function of the area, and local environmental sensitivity as the basis for determining the form of land protection, utilisation and restoration. In areas of significant ecological value, the Company implements management measures aimed at protecting vegetation cover, ensuring habitat sustainability and maintaining ecosystem functions. These efforts include the designation and management of conservation areas, vegetation rehabilitation, land restoration, and species enrichment activities tailored to the conditions of each working area.

PHE Upstream Subholding ensures that every stage of operations—from construction, through operations, to post-operational phases—is supported by environmental impact assessments and management plans as set out in the EIA document. These assessments form the basis for determining appropriate environmental management measures at each stage of operations to acquire environmental permits. Based on the EIA document, there are two main post-operation activity plans, namely:

- Facility/Infrastructure Dismantling

  Carried out by removing and dismantling disused facilities or infrastructure in accordance with applicable regulations.
- Revegetation

  Carried out by restoring the land through the planting of vegetation suited to the local environmental conditions and characteristics.

Throughout 2025, PHE's Upstream Subholding has carried out tree and mangrove planting in various areas, covering 355 hectares within its premises, 289 hectares outside its premises, 763 hectares within Forest Area Use Permits (PPKH), and 234 hectares through its voluntary planting programs. In addition, PHE has rehabilitated a 23,298-hectare river catchment area (DAS) by planting 3,241,369 trees. This initiative reflects the Company's responsibility as the holder of a PPKH covering 591,786 hectares. Thus, PHE Subholding Upstream has carried out rehabilitation, restoration and conservation of biodiversity and land even though exploration activities are still ongoing in 100% operational working areas.

Biodiversity Strategic Plan

PHE has formulated a strategy to minimize negative impacts on biodiversity and land across all working areas; this is outlined, among others, in the PHE ONWJ Strategic Plan and Work Plan Regarding Biodiversity Protection for the 2022–2027 period. The strategic plan document details program objectives, locations, implementation phases, execution details, budgets, persons in charge, and success indicators. The PHE ONWJ strategic plan is summarized in the following table.

Program	Location	Success Indicators
North Coast of Java Mangrove Restoration (REMAJA) implementing Shark Tooth Innovation	• Karawang Regency • Subang Regency • Bekasi Regency • Kepulauan Seribu Administrative Regency	• Addition of mangrove ecosystem area by 50 hectares by 2029 • Increase in mangrove density by 10,000 individuals/ha/year • Carbon sequestration of 13 tonnes/Ha in the form of plant carbon stock • Increase in Biodiversity Index by 5% from the baseline • Increase in the number of mangrove species (true mangroves and associated mangroves) by 5 species/year

Program	Location	Success Indicators
Coral Reef Guardians in the North Sea of Jakarta and West Java (OTAK JAWARA) implementing Honai Module Innovation	Biawak Island, Indramayu Regency	• Preservation of 0.025 Ha of coral reef area • Increase in reef fish abundance by 5% from the baseline
OTAK JAWARA Through Implementing Paranje Module Innovation	Sukakerta Village, Karawang Regency	• Expansion of coral transplantation area increases by 0.01 Ha per year • Increase in reef fish abundance by 5% from the baseline
OTAK JAWARA dengan Menerapkan Inovasi Coral Box	Sukakerta Village, Karawang Regency	• Expansion of coral transplantation area increases by 0.01 Ha per year • Increase in reef fish abundance by 5% from the baseline
KONSER MYUSIK (Hawksbill Turtle Saving Conservation) through a CCTV-Based Early Detection System using Renewable Energy at the Pulau Rambut Wildlife Sanctuary Ramsar Site	Pulau Rambut Wildlife Sanctuary Ramsar Site, Kepulauan Seribu Administrative Regency	• Rescue of all identified nests (nesting sites) • A minimum of 80% of nests secured (relocated) • Increase in hatching rate and hatchling growth percentage by at least 50% • Increase in the number of hatchlings released into the wild by 20 individuals per year

No Disturbance Areas

PHE has designated interference-free zones, which were formally established through decision letters in 100% of operational working areas. Several interference-free zones are presented in the following table.

Entity	Decision Letter Number	Area	Area (Ha)
PEP Adera	SK No. 001/ EP3640/2018-S0	Surrounding Area of SPU Raja II: Buffer zone of open land at Raja Field	12.4
	SK. No. 392/ EP3640/2019-S0	Surrounding Area of SPU Abab II: Biodiversity conservation area for fig trees (*Ficus* sp.)	
	SK No. 01/ EP3640/2021-S0	Biodiversity conservation area at Dewa Field	

Entity	Decision Letter Number	Area	Area (Ha)
PEP Jambi	2012	Bajubang: Protection and management of endemic plant species at Bajubang Field	33.69
	2017	Kenali Asam: Protection and management of endemic plant species at Kenali Asam Field	
	2020	Gerai Energi (Green Edu Agrotourism Rumbai Energi): Hydroponic greenhouse facility	
PEP Limau PEP Limau	SK No. 032/ EP3630/2018-S0	Bedegung: Tree planting activities	-
	SK No. 001/ EP3630/2016-S0	Limau Hijau: Tree planting activities	-
	SK No. 127/ EP3630/2020-S0	Clouded Leopard Conservation: Food Barrier initiative to support the restoration of the clouded leopard's ecosystem and habitat, based on community economic empowerment in the Sumur Jaya Mandiri Forest Farmer Group	60.46
PEP Pendopo PEP Pendopo	SK No. 023/ PHR72380/2022-S8	Pendopo Complex: - Conservation of Slowly Disappearing Plant Species - Production of Organic Fertilizer using Local Microorganisms (MOL) derived from Maja Fruit (*Aegle marmelos*) for Nursery Activities	
	SK No. 023/ PHR72380/2022-S8	Flora Greenhouse: Selangit Orchid Garden, Selangit Flora Encyclopedia, and a Smart Greenhouse equipped with a Programmable Logic Controller (PLC) for humidity control sensors.	

Entity	Decision Letter Number	Area	Area (Ha)
PEP Prabumulih	SK No. 008/ EP3610/2019-S0	Isau-isau Elephant Training Center: - Conservation of Sumatran Elephants (*Elephas maximus sumatranus*) at the Isau-isau Forest Group Elephant Training Center in collaboration with the South Sumatra BKSDA - SKW II Lahat - Inventory and conservation of 43 species of Sumatran Elephant feed - Development of a King Grass (*Pennisetum purpureum*) demonstration plot - Biodiversity enhancement of Petanang / Kapur Guras (*Dryobalanops oblongifolia*) through the use of elephant dung fertilizer	-
PEP Pangkalan Susu	2024	Dewa Pasar Rawa: Mangrove Conservation	176
PEP Ramba	SK No. Print-089/ EP3150/2014-S0	Endemic Plant Forest: Conservation of endemic Pule trees, enrichment of Laban tree vegetation, and preservation of Gelam and Jelutung trees as endemic species in the Ramba area.	-
PEP Rantau	SK No. 20/ PHR62340/2022-S0	Green Nation: Sawang Langit	209
PHE Jambi Merang	SK No. 0007/ PHR62390/2023-S0	Conservation of flora and fauna in Pulai Gading, regreening for the establishment of green open space (RTH) in Sungai Kenawang, conservation in Taman Rimbo, reservoir (*embung*) in Mendis Village, and social forestry.	48.35

Entity	Decision Letter Number	Area	Area (Ha)
PHE NSO	SK No. 324/ PHR62330/2022-S0	Turtle breeding is carried out at Pantau Bantayan, alongside the conservation efforts for various wildlife including birds, mammals, insects, and reptiles. The program also focuses on conserving plankton and benthos, as well as coral fish. Additionally, there are ongoing conservation activities for pine trees and mangroves to support ecosystem balance and biodiversity.	110.06
PHE Ogan Komering	SK GM No. 049-12-XXI-2019	PHE Conservation Area for Flora and Fauna	10
PHE Raja Tempirai	SK No. Print 238/FM/SK/ VII/2024	PHE RT Flora and Fauna Conservation Area Balai Raja Wildlife	2.08
PHR Bekasap Rokan	SK No. 073/ PHR85416.2024-S0	Sanctuary & Sebanga Elephant Training Center	612.47
PHE ONWJ	SK No. 0574/ PEP60000/2021-S0	The areas around Karawang Regency, Bekasi Regency, Kepulauan Seribu, Bokor Nature Reserve, Pulau Rambut Wildlife Sanctuary, Green Think in Subang Regency, and Indramayu Regency are part of the REMAJA Program (Restoration of Mangroves on the North Coast of Java).	163.22
	SK No. 0574/ PEP60000/2021-S0	Around Karawang and Indramayu Regencies, the ORANG TUA ASUH KARANG (OTAK JAWARA) Program is implemented.	0.05
	SK No. 0574/ PEP60000/2021-S0	At the Ramsar Site of Pulau Rambut Wildlife Sanctuary, conservation programs include the Hawksbill Turtle (*Eretmochelys imbricata*) conservation initiatives.	8.4

Entity	Decision Letter Number	Area	Area (Ha)

Conservation Programs

PHE Subholding Upstream strengthens ecosystem management through rehabilitation and habitat restoration activities tailored to the ecological characteristics of each working area. The programs include planting various tree species, including endemic species, as part of efforts to maintain habitat functions and support environmental recovery. Implementation is carried out in 100% of working areas through a collaborative approach involving universities and academics, NGOs, local communities, as well as relevant government agencies, including Natural Resources Conservation Agency (BKSDA) and Local Environmental Agency (DLH).

During 2025, PHE implemented 74 conservation programs across 29 working areas, covering a total area of 90,756.16 Ha. These programs protected 215 protected fauna species and 483 protected flora species. Some of these protected wildlife species are classified as critically endangered on the IUCN Red List, such as the orangutan (*Pongo pygmaeus*), the hawksbill turtle (*Eretmochelys imbricata*), the Sumatran elephant (*Elephas maximus*) and the senkawor maleo (*Macrocephalon maleo*). Several biodiversity programs that have been carried out are shown in the following table.

Protection of Sumatran elephant

PHE NSO, Region 1

Mitigation of conflict between humans and Sumatran elephants (*Elephas maximus sumatrensis*) in Cot Girek through the establishment of village management units, public awareness campaigns, training, and patrols.

Mangrove Restoration and Water Conservation

PEP Pangkalan Susu, Region 1

Planting of 2,500 mangrove trees (0.1 ha) and 500 sugar palm trees in the Mampu River watershed (0.1 ha).

Land Management to Sustain Nectar Production

PHE Jambi Merang, Region 1

Conversion of organic waste into fertilizer to reduce waste, increase soil fertility, and improve soil structure. Improvement in vegetation growth supports the availability of natural food sources for bees, thereby strengthening the ecological functions of the area.

Application of Microalgae Biostimulant

PHE OK, Region 1

Implementation of microalgae biostimulants, special care for agarwood buaya (*Aetoxylon sympetalum*), and community awareness-raising to improve the survival chances of conserved flora.

Damar Putih Conservation

PHE Raja Tempirai, Region 1

Conservation of damar putih (*Agathis labillardierei*) in Air Itam watershed through restoration of lost forest cover and study on the feasibility of water and soil conservation.

Javan Gibbon Conservation

PEP Subang, Region 2

Javan gibbon conservation on Mount Puntang and mangrove planting in Mayangan Village. In 2025, this program successfully conserved 10 gibbons, released 5 gibbons into the wild, and planted 4,250 mangrove trees on 2.25 hectares of land.

Surili Conservation
PEP Tambun, Region 2

Conservation of surili (*Presbytis comata*) in the Gunung Burangrang Nature Reserve and public education about surili conservation efforts.

Hawksbill Sea Turtle Conservation
PHE ONWJ, Region 2

Rescue of 545 hawksbill sea turtle eggs in 2025, where 386 eggs were hatched and 217 hatchlings were released into the wild.

Orang Utan Rehabilitation
PHM, Region 3

Promotion on the health and welfare of rehabilitated orangutans, as well as their habitat recovery.

Mangrove Conservation
PEP Tarakan, Region 3

Mangrove conservation on Tarakan Island and in the Tarakan Coastal Area. This program increases the potential for ecosystems to develop into more complex habitats as the canopy grows and organic matter increases.

Banggai Cardinalfish Conservation
PEP Donggi Matindok, Region 3

Integrative model for the recovery of the Banggai cardinalfish (*Pterapogon kauderni*) Population through the rehabilitation of sea anemones and sea urchins, which serve as habitat for cardinalfish juveniles.

Java Wide Leopard Conservation
PEP Jatibarang, Region 2

Protection of Java wide leopards and their habitats and public education about leopard conservation efforts. The program is supported with a tree adoption program and ecosystem restoration of endemic species.

Conservation Education with Augmented Reality
PHM, Region 3

Growth improvement of Kalimantan orchid native species and promotion of knowledge about orchids, especially among children, through an augmented reality-based book.

Orchid Conservation
PEP Bunyu, Region 3

Orchid propagation using fern, soil, and charcoal as growing media to help maintain the populations of rare and endemic orchids in Kalimantan.

Conservation of Multiple Endemic Species
PEP Cepu, Region 4

Conservation and propagation activities for endemic, rare, endangered, and/or protected plants including wangon, rengas, and sonokeling. The Company also strengthened relationships with communities and the local government.

Coastline Care-Mangrove Day
PEP Papua, Region 4

Protection of coastlines from erosion and seawater intrusion. This program promotes economic sustainability for coastal communities such as through fisheries and ecotourism.

Besides the initiatives mentioned above, PHE Subholding Upstream conducted several international collaborations. Through PT Pertamina (Persero)'s membership of the international association IPIECA, PHE is contributing to the development of a biodiversity management framework that complies with global oil and gas industry standards and best practice. PHE collaborated at an international level through its participation in the UN Climate Change Conference COP30 to discuss the implementation of the BAP within PHE's Upstream Subholding.

In 2022, PHE Subholding Upstream collaborated with the South Korean energy company KHAN on an offshore platform decommissioning project. The project involved the deconstruction and repurposing of the platform as an artificial reef (rig-to-reef) in Bontang, East Kalimantan.

In collaboration with the Ministry of Maritime Affairs and Fisheries (KKP) and the Korea Maritime and Ocean University Consortium (KMOUC), PHE previously carried out a study to determine the location for the deployment of post-operational platforms using the rig-to-reef method on Biawak Island, Indramayu Regency, West Java. The study covered:

1. Exclusion mapping: Exclusion of undesirable areas based on the coastal and small islands zoning plan for West Java Province.
2. Suitable depth: The expected water depth is 30–40 metres. Depth affects water turbidity, which in turn impacts the penetration of sunlight required by algae. Water temperature is also related to depth; deeper waters tend to be colder due to the thermocline, which can act as a barrier to some organisms.
3. Seabed slope: The slope must be less than 10 to prevent the rig structure from shifting or capsizing due to current movement.
4. Habitat quality: Water parameters such as salinity, temperature, dissolved oxygen levels and currents need to be considered to support the biota that may be present or are intended to be recruited.
5. Substrate type: The required substrate must consist of sediment to ensure the platform remains stable.
6. Fish and reef abundance: The condition of existing coral reefs and reef fish must be taken into account.
7. Ocean currents: Areas with strong tidal currents should be avoided to prevent scouring and to allow for the monitoring of coral reefs.

The study also identified the risks and set out mitigation action plans for the pre-construction phase (permitting and public engagement), the construction phase (shutdown of the transmission pipeline, platform decommissioning, facility dismantling, mobilisation, and platform sinking), and the post-operational phase (demobilisation and the development of new habitats).

Oil Spill

PHE Subholding Upstream recognizes that accidental oil releases in the form of spills pose significant risks to the environment, operational safety, and the health of employees and nearby communities. PHE is committed to implementing effective measures to prevent oil spill with reference to Standard Operating Procedure (SOP) for Performance Indicator Management Process Safety & Asset Integrity Management System (PSAIMS). Oil spill incidents can occur across various operational facilities, ranging from production wells and processing facilities to onshore and offshore pipeline transportation networks. Should there be any oil spill incident, PHE will implement emergency rapid and calibrated emergency response actions and comprehensive remediation strategies to minimize the environmental and social consequences of any potential oil spill. For this purpose, PHE has established SOP for Emergency and Crisis Response Management within the Subholding Upstream, SOP for Oil Spills Contingency Plan in the Subholding Upstream, and SOP of Remediation Implementation Management for Contaminated Land, Ecosystem, and Substrate.

The SOP for Emergency and Crisis Response Management serves as a guide for members of the Site Emergency Response Team (SERT), Incident Management Team (IMT), Business Support Team (BST), Crisis Management Team (CMT), and related functions in managing emergency and crisis situations in a comprehensive, effective, rapid, and safe manner. This SOP governs emergency and crisis management, organizational structure, roles and responsibilities, activation mechanisms, coordination, and the management of Emergency Response Organization (ERO) resources.

The SOP for Oil and Hazardous & Toxic Substance Spill Contingency Planning outlines the governance, coordination, and strategies for effectively addressing oil spills and ensures resource readiness for emergency situations. This SOP details oil spill response procedures covering onshore areas, shorelines, rivers, swamps, lakes, estuaries, jetties, and offshore waters. PHE's emergency response organization is designed to address various incidents by considering risk levels, incident types, scale, and emergency complexity, including oil spill events, through the implementation of an integrated emergency response organizational structure aligned with the applicable emergency response hierarchy.

Governance of Oil Spill Mitigation

SERT activation is carried out when emergency conditions require support from professional emergency response personnel with specialized competencies and equipment, such as an Oil Spill Response Team. Managing emergency response through SERT is considered more effective and responsive than handling it solely through the Company's normal organizational functions, given the need for rapid, coordinated, and tactical on-site response.

SERT is the team responsible for implementing tactical emergency response operations at production, project, and exploration operation sites and facilities. Within the emergency response structure, SERT is led by an On-scene Commander (OC) who operates under the coordination of the Operation Section Chief within the Incident Management Team (IMT). For emergencies that escalate to become sufficiently large and complex and require a more competent and qualified OC, the position of OC will be filled by a leader at the Field Manager (FM) level. OC has the authority to mobilize and activate SERT members according to the needs of the emergency scenario, including activating specialized teams such as the Oil Spill Response Team to carry out control, response, and remediation actions resulting from an oil spill incident.

In addition, PHE Upstream Subholding has a Business Support Team (BST), a management team led by the Regional/Subsidiary Director responsible for providing support in disaster response by reporting incidents based on the nature and severity of the event. Upon receiving a report of an oil spill incident from the IMT, the Regional Director/Subsidiary Director activates the BST as necessary, in accordance with the criteria for BST activation outlined in the SOP for Emergency and Crisis Response Management.

The President Director of PHE Upstream Subholding will activate the Crisis Management Team (CMT) and serve as the CMT Leader if a crisis arises or if the oil spill response operations conducted by the IMT and SERT require support from international oil spill response resources, such as personnel for Well Control Incident Technical Specialists or subsea caps and the equipment necessary for their deployment. The CMT may activate the Business Contingency Plan (BCP) if an oil spill incident has the potential to disrupt the company's operations.

Causes of Oil Spill

The potential for oil spills can arise from various activities in both onshore and offshore areas. Oil spill risks may occur during drilling and well service operations, as well as onshore exploration activities and new development projects, particularly due to the release of hydrocarbon fluids during operations, well control system failures, leaks from oil storage in stock tanks, or incidents involving work equipment. Production facility activities, including well testing and Gathering Stations, have the potential to cause spill incidents due to operational disruptions, equipment failures, or leaks in production support facilities.

Crude oil transportation activities via pipeline networks, including onshore pipelines and pipelines crossing river areas, carry the risk of leaks or facility damage that could result in oil spills into terrestrial environments or water bodies. Onshore contamination generally occurs due to leaks in pipeline networks, valves, or storage tanks, oil overflow, tank ruptures, or oil stranded on beaches as a result of offshore spills.

Methods of Oil Spill Mitigation

Once indications of an oil spill are identified, PHE carries out oil spill monitoring as an initial step to initiate effective and sustainable response measures. This includes determining the spill location, size, and volume, predicting the direction of movement, and continuously tracking the spill's movement. This monitoring involves collecting data on the characteristics and behavior of the spilled oil (oil fate/behavior), physical environmental conditions such as weather, currents, and tides, as well as identifying resources that may be impacted. All of this information forms the basis for developing response strategies tailored to estimated oil behavior under various seasonal conditions. In implementation, PHE applies two oil spill monitoring methods, namely marine/waterborne surveillance using vessels/boats, and aerial surveillance using aircraft or helicopters.

Estimating the volume of an oil spill is necessary to guide more effective response planning and to determine risks to environmental and socio-economic resources. Accordingly, PHE conducts this estimation as soon as possible after a spill occurs to determine:

- The equipment and personnel required
- Potential threats to shorelines and/or sensitive areas
- Ecological impacts
- Storage and disposal requirements for recovered oil

Spill volume estimation is calculated using two methods: direct observation of areas affected by the oil spill, and volume estimation calculations based on collected spill data. For spills in water, volume estimation is performed by calculating the spill area (km^2) based on spill length (km) and width (meters) of the spill/sheen, and incorporating the visual appearance percentage of the spill/sheen based on specific color and appearance characteristics until the total reaches 100%. Meanwhile, for onshore spills, volume calculation is relatively more difficult to implement in the field due to challenges in accurately determining the surface area of irregularly shaped spills and the thickness of oil floating on water. Therefore, the primary objective of calculation under these conditions is to obtain as much data as possible to adequately estimate spill volume.

PHE's oil spill response strategy is implemented through four main stages:

1. **Initial Response Stage**

   After receiving information about an oil spill, an immediate assessment is conducted to identify hazards posed by the spill.

2. **Oil Spill Containment and Remediation Stage**

   Following initial response actions, equipment and personnel for containment and remediation are deployed to the spill location.

3. Sensitive Area Protection Stage

Concurrently with oil containment and remediation, sensitive coastal areas threatened by the spill are identified, and additional resources such as vessels/boats are mobilized to protect these areas.

4. Cleanup and Remediation Stage

Onshore oil spill response operations are carefully planned and organized, and their implementation may require mobilizing a large workforce over a relatively long period.

Oil containment is most effective near the spill source, where the oil has not yet spread over a wide area and the still-localized oil thickness allows for optimal remediation. In these areas, the oil layer accumulated within containment booms tends to be thicker, thereby increasing the efficiency of skimmer operations. The feasibility of applying oil spill containment and remediation techniques, as well as the use of dispersants, generally depends on several factors: the type of oil spilled, the availability of logistical resources, the timing of response implementation, and environmental conditions at the spill site.

If the spill volume is large and cannot be contained near the source, a comprehensive response strategy is required as the primary reference to ensure all factors are considered and appropriate actions can be applied. Oil spill response preparedness also focuses on mitigation and protection of sensitive areas before spill impacts reach the coastline. This includes establishing a Shoreline Cleanup and Protection Team (SCAT) to mitigate impacts in coastal areas, as well as implementing Spill Impact Mitigation Analysis (SIMA), including Wildlife Response, to mitigate impacts on marine biota and fauna.

The equipment requirements for oil spill response in both offshore and onshore operations follow the same control principles: limiting the spread of the spill (containment), recovering the oil (remediation), temporary storage, and cleaning affected areas. Equipment used in both conditions includes oil booms to control the spread of oil, oil skimmers and/or vacuum skimmer trucks to remove oil from affected areas, temporary storage tanks for storing recovered oil, oil absorbents to soak up residual oil, and cleaning equipment to support environmental remediation. In addition, the need for additional equipment can be determined based on risk assessment results, taking into account site characteristics, potential spill scenarios, and the sensitivity level of the affected environment.

Although the handling principles are similar, certain equipment is specific to the environmental medium. In offshore operations, equipment such as oil dispersant pumps and sprayers may be used, subject to technical studies, to help control oil spills in water bodies. Meanwhile, in onshore operations, oil spill risk control can be supported by facilities such as emergency ponds, oily water separator ponds, or similar containment basins as initial storage areas, as well as oiled wildlife response systems to address potential impacts on wildlife.

For oil spills in shallow waters, the primary response objective is to prevent or collect the oil before it reaches the shoreline. Key equipment used in this strategy includes specialized mechanical remediation systems for shallow water (shallow water remediation system), deflection and containment booms, a Shoreline Cleanup Assessment Team (SCAT), and wildlife protection assets.

In some cases, such as storage tank leaks or pipeline ruptures on land, onshore spill sizes can be large and persist continuously over a relatively long period. Therefore, spill containment efforts need to be carried out through the implementation of secondary containment systems at or near the spill source to minimize the affected area and the quantity of impacted soil.

Beach Cleaning Strategy

In carrying out cleanup of beaches affected by oil spills, PHE applies several techniques tailored to the substrate type, pollution level, and oil characteristics. Manual cleaning is used for light oils and/or in areas with limited access, while washing/flooding is applied on gravel/rocky beaches with extensive oil contamination. Randomized washing is carried out on piers, rocks, seawalls, and other oil-contaminated impermeable surfaces, whereas mechanical cleaning is used for areas with more extensive contamination that require heavy equipment. In addition, beach washing is applied to remove oil mousse patties along sandy beaches; the use of absorbent materials (sorbents) is employed to remove residual oil from gravel/rocky beaches with light contamination levels; and natural oil removal is implemented through polishing operations on sensitive beaches with very light contamination levels.

Oil Spill Volume

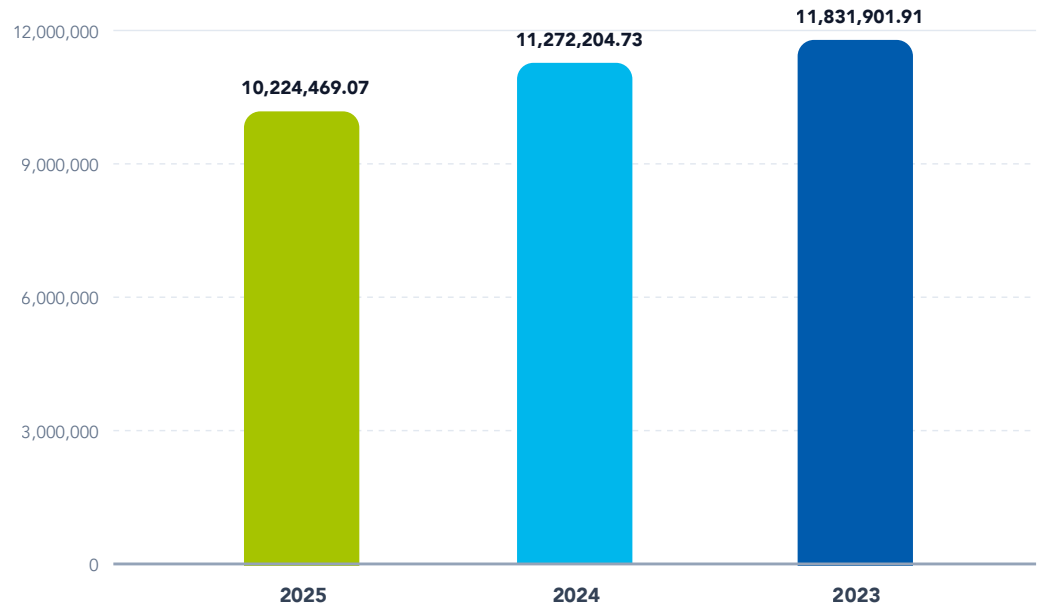

PHE Subholding Upstream's oil spill volumes throughout the last 4 years are shown in the table below. Oil spill intensity per revenue has decreased from the previous years.

	2025	2024	2023	2022
Oil Spill Volume (m^3)	5.39	6.94	7.36	15.17
Total Revenue (million USD)	13,819.62	14,330.34	14,568.38	16,183.40
Oil Spill Intensity per Revenue (m^3/million USD)	0.000390	0.000484	0.000505	0.000937

Freshwater Consumption

The water abstracted by the Company consists of fresh water and seawater. In the case of fresh water, the sources from which it is abstracted comprise renewable and non-renewable groundwater, surface water—namely rivers and lakes-, and water purchased from third parties. Renewable groundwater sources are those that can be replenished within a 50-year period, whilst non-renewable groundwater sources are those that are difficult to replenish within a 50-year period and are located at greater depths than renewable groundwater sources. Freshwater consumption over the past 3 years is shown in the following graph.

Freshwater Consumption Volume (m^3)

1.3 Reducing Toxic Emissions and Waste

Policies on Environmental Impact

Through its Sustainability Policy, PHE is committed to reducing greenhouse gas emissions, non-GHG emissions, substance releases, waste and effluents, and to addressing the broader issue of climate change by integrating it into the company's strategies and operations. PHE strives to protect and conserve the environment, water, natural resources and energy through an environmental management system that is continuously monitored.

The commitment to minimising environmental impact is also set out in the Health, Safety, Security & Environment (HSSE) Policy. This policy includes a commitment to preventing pollution through the management of hazardous and non-hazardous waste in accordance with the 'refuse, reduce, reuse, recycle and recovery' (5R) principles. The company consistently practises sound environmental management, supported by the implementation of an Environmental Management System and Life Cycle Assessment (LCA). Sustainability Policy and HSSE Policy apply to PHE, all subsidiaries, business partners and consumers.

Non-GHG Emissions

PHE has been monitoring non-GHG emissions, including nitrogen oxides (NOx), sulphur oxides (SOx), non-methane volatile organic compounds (nmVOC), and particulate matter (PM). Non-GHG emissions are calculated using the emissions calculator, which is the standard application for emissions calculations across all PT Pertamina (Persero) subsidiaries. The emission calculator refers to the API Compendium and other relevant references. The total non-GHG emissions generated over the last 5 years are shown in the table below.

Emission Category	Mass (tonnes)				
	2025	2024*	2023*	2022*	2021*
SOx	35,993.10	6,889.39	4,835.12	5,601.50	7,188.17
NOx	50,921.48	50,960.09	54,143.67	54,778.33	50,445.55
nmVOC	11,385.50	11,930.79	11,573.40	11,505.21	11,267.25
PM	2,334.83	2,259.03	2,363.64	2,325.21	2,014.88

*Note:

The restatement of emissions calculations in the PHE Subholding Upstream's area was due to an adjustment to the units of measurement and asset disposals.

Non-GHG Emission Intensity

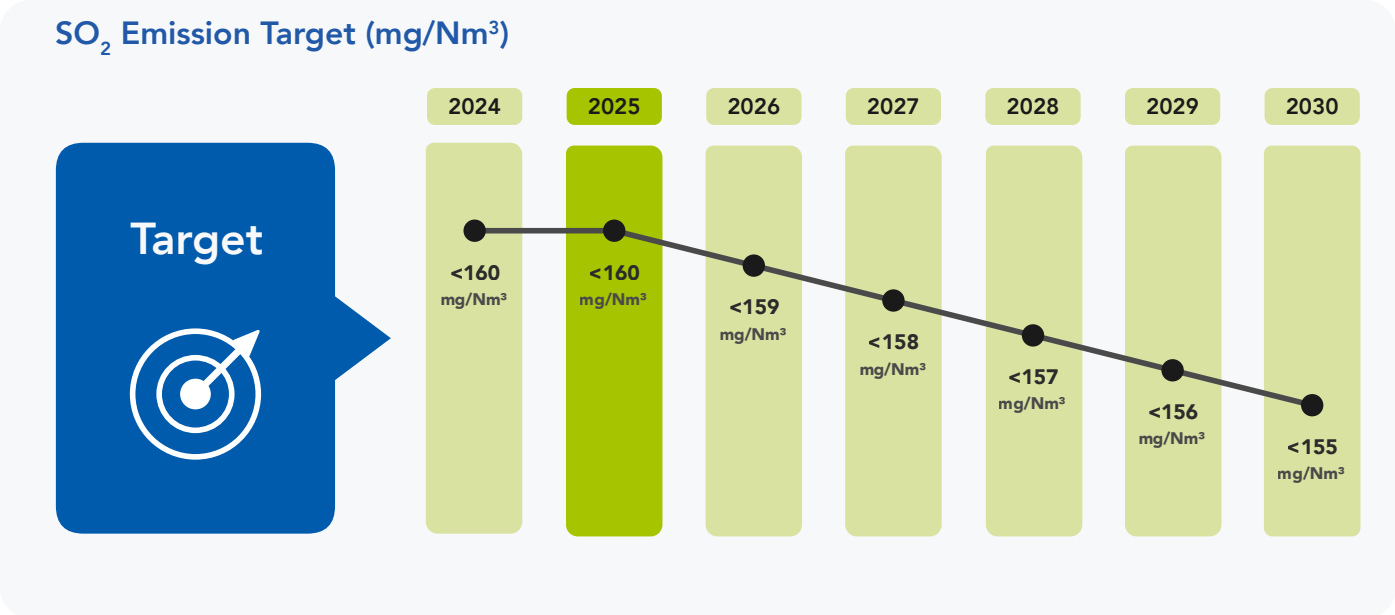

Non-GHG emission intensities per revenue were calculated covering all working areas as shown in the table below.

Emission Category	Mass per Revenue (tonnes/million USD)				
	2025	2024	2023	2022	2021
SOx	2.60449	0.48076	0.33189	0.34613	0.61228
NOx	3.68472	3.55610	3.71652	3.38485	4.29687
nmVOC	0.82386	0.83255	0.79442	0.71093	0.95972
PM	0.16895	0.15764	0.16224	0.14368	0.17162

SOx emissions increased in 2025 compared with 2024 and 2023. This change was primarily driven by the expansion of PHE's operational scope following the inclusion of the Jambaran-Tiung Biru (JTB) PEPC working area.

Non-GHG Emission Reduction Target

PHE Subholding Upstream has established non-GHG emission control targets for the 2024–2030 period, designating SO_2 concentration as a key performance indicator. This selection aligns with Indonesia's regulatory monitoring and compliance framework, which evaluates pollutant concentrations at individual emission sources in milligrams per normal cubic meter (mg/Nm³). The SO_2 concentration target is capped at a maximum of 160 mg/Nm³ for 2025 and will be progressively reduced to 155 mg/Nm³ by 2030, while maintaining full compliance with applicable source-specific emission threshold limits.

The results of monitoring internal combustion engine emissions at each working area in 2025 showed that 100% of internal combustion engines produced SOx emissions below the threshold of 160 mg/Nm³.

Monitoring of Non-GHG Emissions

Nevertheless, PHE remains committed to complying with the applicable emission quality standards. Based on the results of emissions monitoring across each working area, 100% of internal combustion engines subject to monitoring for NOx, SO_2, nmVOC, and PM parameters have met the applicable emission limit values. Compliance with emission quality standards for NOx, SO_2, and PM parameters is governed by Regulation of the Minister of Environment and Forestry No. 11 of 2021. Meanwhile for nmVOC parameters in engines associated with the glycol dehydration process, compliance with emission quality standards is governed by Regulation of the Minister of the Environment No. 13 of 2009.

To complement concentration-based evaluations and enhance emission performance quantification, SO_2 monitoring data is converted into total emission loads by taking into account flue gas flow rates and operational hours per source. In 2025, the calculation scope encompasses 339 internal combustion engines. Based on these calculations, the total emission load from internal combustion engines reached 374.41 tonnes of SO_2 equivalent.

Non-GHG Emission Reduction Programs

PHE's non-GHG emissions reduction initiative programme is implemented nationwide, spanning PHE's various working areas from western to eastern Indonesia. The programme's geographical spread reflects the implementation of measures to manage and reduce non-GHG emissions across different regions and operational activities, in line with the characteristics and needs of each working area. Several non-GHG emission reduction programs are shown in the table below.

Region	Location	Program	Emission Category	Emission Reduction (tonnes)*
Region 1	PEP Rantau	Digital Acceleration for Rig Emission Reduction (DARE) with the utilization of machine learning to predict squeeze cementing volumes, thereby reducing the need for additional work and shortening rig operation times to lower energy consumption and emissions	SOx	0.25
			NOx	3.84
Region 2	PHE ONWJ	Quick response shutdown button (QREB) to accelerate the vessel shutdown process at offshore platforms, thereby reducing operational duration and exhaust emissions in the event of a leak	SOx	1.38
			NOx	21.00
Region 3	PEP Bunyu	Conversion of Electric Submersible Pump (ESP) system to gas lifting for wells requiring significant electrical energy, where the gas lifting method utilizes the well's associated gas	SOx	0.02
			NOx	9.88
Region 4	PEP Sukowati	E-PEPSI (Effective Synchronized Power Generation) automatically synchronizes two power generators with different voltages and capacities to reduce the number of operating gas turbines, thereby lowering fuel consumption and exhaust emissions	SOx	0.13
			NOx	191.13
PT Badak NGL	PT Badak NGL	Fuel gas efficiency by optimizing gas usage as fuel in operational facilities, thereby potentially reducing air pollutant emissions from the combustion process	SOx	7.65
			NOx	107.51

*Data up to June 2025

Waste

Waste generated by PHE is dominated by hazardous waste. Non-hazardous waste has increased compared to the previous year, whilst hazardous waste generation in 2025 became the lowest in the last three years. The predominant types of hazardous waste in 2025 were production process residues, crude oil tank sludge, and oil-based and/or synthetic oil-based drilling cuttings. Details of hazardous waste and non-hazardous waste generation are shown in the table below.

Waste Category	2025	2024	2023
Hazardous Waste (tonnes)	163,127.14	175,144.45	209,622.78
Non-Hazardous Waste (tonnes)	18,854.52	15,569.27	13,887.49
Total Waste Generation (tonnes)	**181,981.66**	**190,713.72**	**223,510.27**

Waste Intensity

Waste Category	Waste Intensity per Sales (tonnes/million USD)		
	2025	2024	2023
Hazardous Waste	11.80403	12.22193	14.38889
Non-Hazardous Waste	1.36433	1.08646	0.95326

Some of the Company's hazardous and non-hazardous waste is managed through reuse, recycling, and recovery to minimize the amount of waste sent to landfills. Meanwhile, waste sent to landfills also undergoes various forms of management. Details on the amount of waste managed are shown in the following 3 tables.

Management of Hazardous and Non-Hazardous Waste Diverted from Final Disposal

	2025		2024		2023	
	On-Site	Off-Site	On-Site	Off-Site	On-Site	Off-Site
Hazardous Waste	-	83,972.69	9.03	78,938.64	6.43	114,597.14
Non-Hazardous Waste	7,794.93	1,636.18	4,291.56	1,660.73	3,931.45	998.38
Total	**7,794.93**	**85,608.87**	**4,300.59**	**80,599.37**	**3,937.88**	**115,595.52**

Management of Hazardous Waste at Final Disposal

Management Method	2025		2024		2023	
	On-Site	Off-Site	On-Site	Off-Site	On-Site	Off-Site
Incineration & Solidification (tonnes)	1.42	9,694.85	3.57	6,009.66	2.14	7,744.84
Bioremediation (tonnes)	67.53	-	57.24	-	448.61	-

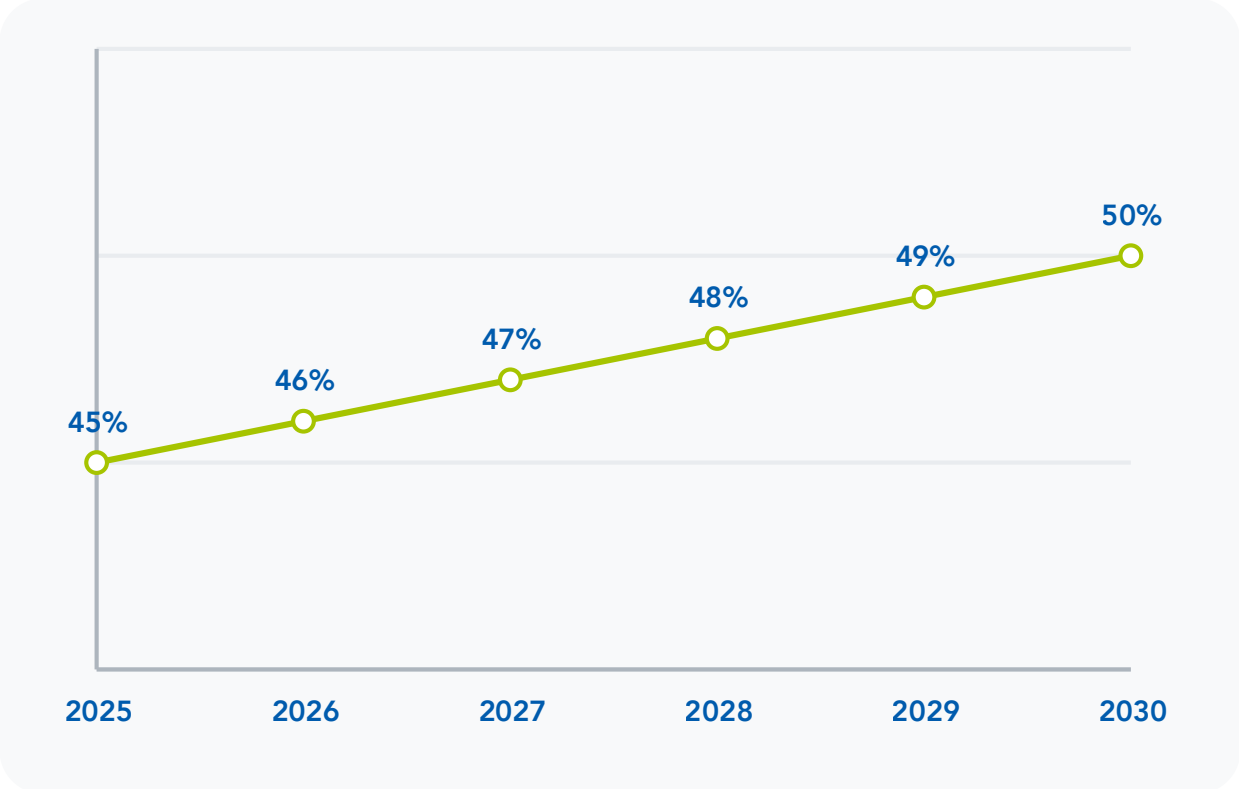

Injection (Sand Management Facility) (tonnes)	66,100.51	130.01	74,475.03	-	70,256.59	-
Landfill (tonnes)	-	3,102.09	-	15,415.00	-	16,528.15
Total (tonnes)	**66,169.46**	**12,926.95**	**74,535.84**	**21,424.66**	**70,707.34**	**24,272.99**

Management of Non-Hazardous Waste at Final Disposal

Management Method	2025		2024		2023	
	On-Site	Off-Site	On-Site	Off-Site	On-Site	Off-Site
Incineration (tonnes)	430.84	24.51	-	320.74	-	194.78
Landfill (tonnes)	2,402.43	6,100.67	2,600.14	6,288.67	2,315.77	5,922.15
Dumping (tonne)	426.27	-	-	-	-	-
Total (tonnes)	**3,259.54**	**6,125.18**	**2,600.14**	**6,609.41**	**2,315.77**	**6,116.93**

Waste Circularity Target

PHE Upstream Subholding has set a waste circularity target for hazardous waste and non-hazardous waste generated from its operational activities. This waste circularity target is calculated against the quantity of waste generated in the corresponding year, thereby reflecting the proportion of that year's hazardous and non-hazardous waste managed through reuse, recycle, and recovery (3R) practices.

The implementation of waste circularity has also been established as one of the Company's environmental management key performance indicators (KPI), ensuring that progress toward the target is managed in a measurable manner, monitored regularly, and embedded within PHE Subholding Upstream's sustainability performance accountability framework. In 2025, PHE had managed 93,278.02 tonnes of hazardous and non-hazardous waste through 3R practices, equivalent to 81.09% of waste diverted from landfills.

Waste Reduction Programs

To achieve its waste circularity targets and reduce the amount of waste sent to landfill, PHE is working to improve its 4R practices (reduce, reuse, recycle and recovery) and meet the government's waste management standards. Several hazardous waste and non-hazardous waste 4R initiatives implemented during 2025 are shown in the two tables below.

4R Programs for Hazardous Waste

Region	Working Area	Program	Category	Waste Reduction Amount (tonne)
Region 3	PHM	Utilisation of B330-2 drilling cuttings waste as cement raw material by licensed third parties	Recycle	32,229.54
Region 3	PHKT	FOSPOR-DOCTOR (Floating Oil Skimmer and Diaphragm Pump using Air Compressor - Dam Oil Collector) to reduce oil sludge through oil recovery and reuse in slurry pits and API separators	Reduce	19,146.09
Region 3	PHSS	Utilisation of SOBM drilling cutting waste as raw material	Recycle	14,145.02
Region 1	PHR	Utilisation of hazardous waste as an alternative raw material by third parties	Recycle	7,263.47
Region 4	PEP Papua	Utilisation of hazardous sludge oil from skim pit Salawati by a licensed third party as an alternative raw material and alternative fuel	Recovery	4,438.51
Region 3	PEP Tanjung	Upgrading process water separation facilities outside existing production facilities through the oily water separation and oil recovery to reduce hazardous waste generation	Reduce	1,689.61
Region 2	PEP OGT	Utilisation of WWTP sludge as an alternative fuel by third parties	Recovery	1,422.33
Region 3	PHSS	ECO-WASTELAND (Eco Friendly Waste Drilling Management Design) to Reduce Contaminated Soil through Oil Catcher Modification at Drilling Sites	Reduce	163.00

Region 4	PEP Cepu	UBAH POLA (Method for Changing the Oil Receiving Pattern from Mature Wells) involves collecting oil via a collection tank equipped with a baffle and filtration system to separate the oil from residues, thereby enhancing the effectiveness of hazardous waste management	Reduce	135.00
Region 3	PHSS	Pipe and Tubing Leak Frequency Reduction Program through High-Accuracy Thickness Inspection Using ThickTube Robot to Prevent Corrosion and Reduce Production Process Residue Waste	Reduce	53.61

4R Programs for Non-Hazardous Waste

Region	Working Area	Program	Category	Waste Reduction Amount (tonne)
Region 3	PHM	Utilisation of organic waste as compost, animal feed and raw material for furniture	Recycle	862.57
Region 2	PHE ONWJ	Utilisation of wooden pallet waste	Recycle	36.46
PT Badak NGL	PT Badak NGL	Reduction of residual waste through waste segregation in refineries, offices and public facilities	Reduce	99.19
PT Badak NGL	PT Badak NGL	Utilisation of calcium silicate insulation waste as a mixing material for the production of lightweight bricks, paving blocks and concrete decking	Recycle	14.99
Region 4	PHE WMO	Composting of ORF organic waste	Recycle	8.15
Region 1	PEP Prabumulih	Utilisation of scrap metal	Recycle	8.14
Region 1	PEP Pangkalan Susu	The DeCoal (Dehumidifier Charcoal) invention program which modifies the DeCoal placement system and the cement stock storage scheme at the SCM Warehouse to reduce warehouse humidity levels and extend the shelf life of cement stock, thereby minimizing potential cement waste generation.	Reduce	2.00

Region 2	PEP Subang	Food serving on plates to reduce packaging waste	Reduce	1.54
Region 2	PEP Subang	Reducing paper waste by printing draft documents on recycled paper	Reduce	1.33
Region 1	PEP Limau Field	Utilization of paper waste	Reduce	0.62

Effluent

The Company's wastewater (effluent) consists of produced water from main activities of the upstream oil and gas industry, which subsequently would be distributed to water bodies, channeled to the evaporation pond, or reinjected. Effluent management for discharge into water bodies must first undergo treatment at a wastewater treatment plant (WWTP) to reduce the pollutants it contains. Effluent treatment is accompanied by monitoring and measurement of the quality of the treated wastewater to ensure it meets the quality standards for the relevant parameters, as set out in Minister of Environment Regulation No. 19 of 2010 concerning Wastewater Quality Standards for Oil and Gas and Geothermal Businesses and/or Activities, the specific Technical Approval for each company, and other applicable requirements. The discharge of treated wastewater into water bodies is subject to a licence or technical approval from the competent authority, taking into account various factors, including the availability of wastewater treatment technology, discharge flow rates and the required quality standards. In 2025, the volume of effluent distributed to water bodies decreased by 5.93% compared to the previous year. The volume of effluent generated over the last 5 years is shown in the table below.

	2025	2024	2023	2022	2021
Volume of Effluent Distributed to Water Bodies (m^3)	172,509,619.59	183,379,455.83	183,166,605.16	170,320,936.11	133,809,982.10
Volume of Effluent Channeled to Evaporation Ponds (m^3)	31,976.00	29,207.86	29,287.41	17,674.86	14,254.36
Volume of Effluent Reinjected (m^3)	494,904,185.21	496,972,461.43	482,046,191.71	480,604,885.87	219,564,571.07
Total Volume of Effluent (m^3)	**667,445,780.80**	**680,381,125.12**	**665,242,084.28**	**650,943,496.84**	**353,388,807.53**

Effluent Pollutant Reduction Target

PHE Subholding Upstream established pollutant concentration reduction targets for 2025 by setting maximum average hydrocarbon concentration limits for each company at 45 mg/L for offshore operations and 15 mg/L for onshore operations. In 2025, the highest average hydrocarbon concentrations recorded across all compliance monitoring points were 25.45 mg/L in offshore areas and 5.52 mg/L in onshore areas, representing performance levels 43.44% and 63.20% below the respective targets.

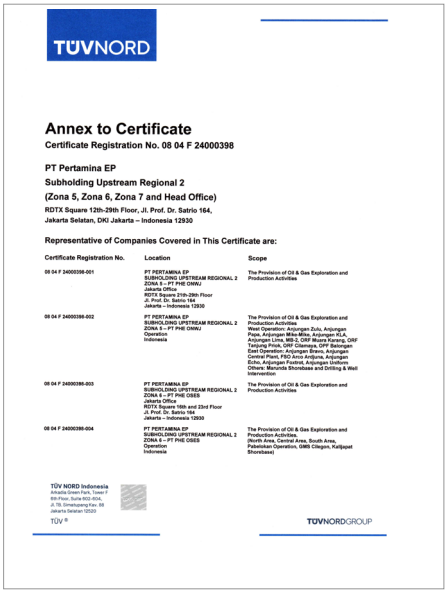

Effluent Reduction Programs

PHE has implemented several effluent reduction programmes, as shown in the table below.

Region	Working Area	Program
Region 2	PHE ONWJ	Reduction of produced water flow using the SINGA (Shut-In Guidelines for Reliability Assessment) method based on the production facility reliability analysis to determine which wells require shutdown
Region 2	PHE ONWJ	Reduction in produced water discharge load through the installation of an annunciator (I-TWEET) at the central plant
Region 2	PHE ONWJ	Application of a Liquid Accumulator Sensor (SANMOL) on the de-gasser to reduce the produced water load
Region 3	PHKT	REDUCTION (Reducing Unwanted Water Production by Water Coning Application)
Region 3	PHKT	PROFESOR (Processing Flock, Emulsion, Slurry for Oil Recovery)
Region 4	PHE WMO	Optimisation of BD injection (injection of produced water from BW and DW wells)

Environmental Management

All of PHE's operational working areas have been certified to ISO 14001:2015 as part of the implementation of the Environmental Management System. The sustained implementation of these standards is upheld through annual surveillance audits and ISO re-certification conducted every three years.

Verification of achievements in reducing non-GHG emissions is carried out annually through internal and external audit mechanisms. Internal audits are conducted via the Pertamina Environmental Regulation Compliance Assurance (PERCA) reporting system, whilst external audits are carried out through the Corporate

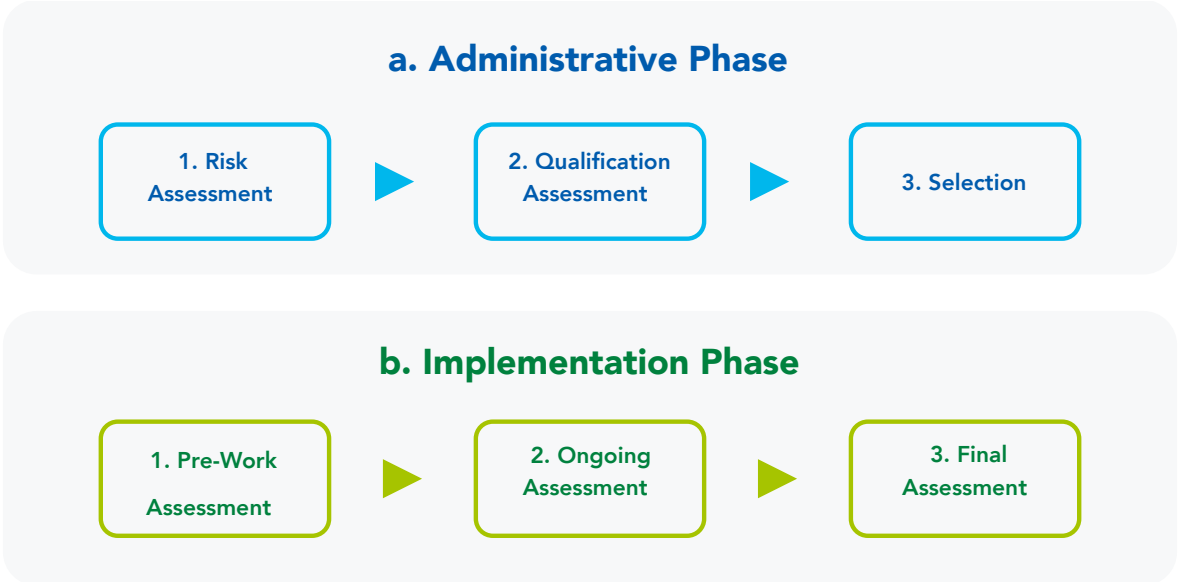

Environmental Performance Rating Programme (PROPER) assessment organised by the Ministry of Environment and Forestry. PERCA covers four assessment categories, namely environmental documentation, water pollution control, hazardous waste management, and air pollution reporting. Meanwhile, the PROPER assessment covers a number of key aspects, including compliance with environmental permits and reporting obligations, water pollution control (PPA), air pollution control (PPU) – including GHG and non-GHG emissions – hazardous waste management (PLB3), management of hazardous substances and polychlorinated biphenyls (PCBs), and waste management.

The scope of the PERCA and PROPER audits across all entities forms the basis for the assessment of the Environmental Excellence Key Performance Indicator (KPI) as part of the Company's KPIs. Through these KPIs, all operational working areas of PHE Subholding Upstream are required to undergo PERCA and PROPER audits, with a minimum achievement of the Blue category (in compliance). In the 2024–2025 PROPER assessment, the Company successfully achieved Beyond Compliance rating at 27 operational sites and Compliance rating at 13 operational sites.

Supplier Compliance

PHE's commitment to managing and reducing non-GHG emissions, waste, and effluents extends to external stakeholders directly involved in its operational chain, particularly vendors, contractors, and suppliers. PHE screens and evaluates prospective vendors, contractors, and suppliers based on their HSSE risk management performance, as reflected in their track record from previous projects or contractual relationships with other parties. Vendors, contractors, and suppliers whose management systems meet the HSSE risk management standards established by PHE will be invited to participate in the tender process. During the tender process, the HSSE risk management performance of vendors, contractors, and suppliers is evaluated, including specific HSSE mitigation plans (HSSE Plans) tailored to the goods and/or services to be provided or performed, which must be fully completed (100%) before work begins.

PHE Subholding Upstream implements the Contractor Safety Management System (CSMS) as a monitoring instrument that refers to the HSSE management plan jointly agreed upon with the relevant vendor, contractor, or supplier, ensuring that commitments stated during the tender stage are genuinely implemented in the field. This is set out in the Standard Operating Procedures for the Contractor Safety Management System (CSMS) No. B8-004/PHE04000/2021-S9 Rev 2. The CSMS process is divided into two phases, the Administrative Phase (3 stages) and the Implementation Phase (3 stages), as follows:

Audit findings from the CSMS, including the results of the environmental management performance evaluation, will be thoroughly analyzed to inform improvements before the process moves on to the next stage in the work cycle.

Social Commitment and Performance

2.1 Improving Occupational Health and Safety

HSSE Policy

PHE's commitment to occupational health and safety, security, environmental and public protection, as well as process safety and asset integrity, is articulated in its Health, Safety, Security & Environment (HSSE) Policy. This policy serves as the foundation for the consistent implementation of HSSE to support the achievement of the Company's objectives, vision and mission. The HSSE policy covers the implementation of the Corporate Life Saving Rules (CLSR), SUPREME, the Safe Work Permit System (SIKA), the Contractor Safety Management System (CSMS), emergency response and crisis management protocols, HSSE risk management, the Process Safety & Asset Integrity Management System (PSAIMS), security incident prevention, prevention of occupational diseases (PAK) through the Promotive-Preventive program, as well as the implementation of Mandatory HSSE Training and the development of technical competency in the HSSE field. The HSSE Policy also emphasizes the commitment to prevent security disturbances and upholding the principles of human rights through the implementation of a Security Management System and Voluntary Principles on Security and Human Rights (VPSHR). The policy applies to directors, managers, employees, business partners, contractors, visitors, and any individual within the Subholding Upstream's operational area, in accordance with their respective functions, roles, and responsibilities.

HSSE Committee

PHE strengthens ESG implementation through the establishment and active execution of the HSSE Committee program. In accordance with the Decision Letter No. Kpts029/PHE00000/2026-S0 Concerning the Sustainability Committee and HSSE Committee of the Subholding Upstream, dated September 24, 2026, PHE established a structure, roles, and responsibilities that support the integration of sustainability and HSSE principles into operations and decision-making processes. OHS performance oversight at PHE is centralized, led by the President Director as Chair of the Subholding Upstream HSSE Committee and supported by the VP HSSE as the primary facilitator. This oversight is supported by two integrated digital systems:

1) ESTRADA, which provides a centralized dashboard for reporting HSSE performance achievements across all functions and regions.
2) P-HORSE (Pertamina HSSE Online Reporting System), which monitors follow-up actions from audits, observations, inspections, and investigations to ensure that all corrective actions are completed within the established timelines.

The results of daily, weekly, monthly, quarterly, and annual monitoring are then consolidated and reported at meetings of the Board of Directors and the Board of Commissioners. Monitoring of program implementation and HSSE issues is also conducted through HSSE committee meetings held every semester.

Occupational Health and Safety Management System

PHE Subholding Upstream has implemented Occupational Health and Safety Management System (OHSMS) certification ISO 45001:2018 for 93% of working areas. This certificate is not mandatory in Indonesia. The Company conducts ISO 45001 recertification audit every 3 years and surveillance audit every year.

SIAP SELAMAT

To ensure the effective and consistent implementation of Occupational Safety and Health (OSH) and operational safety, PHE conducts the SIAP SELAMAT Audit (Safety Integrity Audit Program for System, Equipment, Labor, Assets, Management, ALARP (As Low As Reasonably Practicable), and Technology Risk Management) as part of its compliance with PTK-005 SKK Migas regulations. This audit is one of the mechanisms used to evaluate the implementation of safety systems, the effectiveness of risk controls, the reliability of assets and facilities, and operational readiness in preventing and controlling potential hazards.

In 2025, PHE conducted the SIAP SELAMAT Audit across 8 (eight) operational work areas. The audit was carried out systematically to identify gaps relative to applicable requirements and to ensure that follow-up actions on findings were implemented appropriately and sustainably.

SUPREME

PHE Subholding Upstream strives to prevent and mitigate the risk of workplace incidents and/or accidents by implementing SUPREME (*Sustainability PERTAMINA Expectations for Management Excellence*), which involves identifying risks based on previous occurrences, establishing mitigation measures, and delegating responsibility through the SUPREME technical implementation mechanism. Following the identification process, evaluation, assessment, and audits are conducted on its execution. The audit process ensures that HSSE practices are correctly implemented, assesses how effectively risks are managed, and identifies areas requiring improvement. SUPREME is based on compliance with applicable laws and regulations, such as the Occupational Health and Safety Management System (SMK3); Regulation of the Chief of the Indonesian National Police No. 24 of 2007 on the Security Management System for Organizations, Companies, and/or Government Institutions; the Ministry of Environment's PROPER rating; as well as international management-system standards such as ISO 14001 and ISO 45001, among others.

The frequency of SUPREME audits for each operational area varies based on previous audit results, as stipulated in Pertamina Standard PS-S-023-440-2023-SUPREME Internal Audit Protocol. The same frequency approach is also applied to the SIAP SELAMAT Audit, taking into account the results of previous audits as the basis for determining the audit schedule for each operational area. For areas with excellent first-year audit results (dark green and light green color types), the next audit will be conducted in year 4. Areas with good audit results (yellow color type) will undergo their next audit in year 3. Meanwhile, areas with poor first-year audit results (orange and red categories) will be re-audited in year 2. SUPREME audits have been carried out across 100% of operational areas. In 2025, PHE conducted SUPREME internal audits at 7 operational sites as part of its efforts to ensure the effective implementation of the SUPREME management system.

Corporate Life Saving Rules (CLSR)

The CLSR policy refers to the PERTAMINA policy updated in 2024 and is formalized in the Decree of the President Director of PT Pertamina Hulu Energi No. KPTS-015/PHE00000/2024-S0 regarding CLSR. This policy applies across all PHE Subholding Upstream entities and aims to prevent life-threatening accidents for all workers and business partners, including contractors, during activities and operations within the PHE Subholding Upstream.

The implementation of CLSR involves the roles and responsibilities of the Senior Management within the PHE Subholding Upstream entities, all officers, as well as contractor workers and business partners/vendors/suppliers. The Company has established 10 CLSR indicators:

We also conduct regular monitoring and evaluation to measure the effectiveness of the CLSR implementation.

Prevention of Large-Scale Incidents and Emergency Response

The Company has established the Process Safety & Asset Integrity Management System (PSAIMS) Guidelines No. A8-004/PHE04000/2021-S9, and the Emergency Response and Crisis Management Guidelines No. A8-001/PHE04000/2021-S9 Revision-2, which covers emergency handling for fires, oil and hazardous and toxic substance spills, medical emergencies, security, and natural disasters.

The Company collaborates with other entities (Subholdings) within PT Pertamina (Persero) to strengthen synergy in facing emergency situations. Under normal conditions, emergency response system management is carried out by the HSSE Function, specifically through the Emergency Response and Crisis Management (ERCM) entity. In the event of an emergency, response activities are executed by the Emergency Response Organization (ERO). These emergency response activities are implemented through a tiered response by different EROs, ranging from the field facility/site level (Site Emergency Response Team), the Zone or equivalent level (Incident Management Team), the Regional or Subsidiary level (Business Support Team), up to the Subholding Upstream level (Crisis Management Team), depending on the complexity of the emergency.

Basic HSSE Training

Basic HSSE Training serves as an initial foundation for equipping workers with knowledge of the HSSE Golden Rules, hazard identification, risk assessment, the use of personal protective equipment (PPE), Corporate Life Saving Rules (CLSR), the Safe Work Permit System (SIKA), HSSE Observation, emergency response procedures, Safe Work Check (SWC), Human Factors, Learning from Event (LFE), and Safety Culture for Foundation. Effective training management should be able to connect the training materials with real-life conditions in the field, ensuring that workers not only understand the theory but are also able to apply it directly in their day-to-day work activities.

Contractor Compliance

Contractor Safety Management System (CSMS) is conducted to monitor the consistency of HSSE performance among contractors throughout the contract period. CSMS comprises risk assessment, qualification assessment, selection, pre-work assessment, ongoing assessment, and final assessment.

Contractors are informed of the implementation of the CSMS in Exhibit H of the Service Provision Contract. Through this exhibit, contractors are required to commit to zero accident and implement, amongst other things:

1. Safety management, including the implementation of CLSR, CSMS, occupational health and safety and environmental protection (K3LL), and SIKA
2. Management of fitness for work through 'fit to work' and 'fit to task' programmes, as well as well-managed medical assessment
3. Incident management, including incident reporting, conducting investigations, and learning from incidents
4. Reliable Emergency Response and Crisis Management systems and organisations
5. Security measures based on the Security Vulnerability Assessment (SVA) applicable within Pertamina and the implementation of Community-Based Security (CBS)
6. Awareness-raising and training to enhance workers' understanding and competence
7. SUPREME as the benchmark for the K3LL management system

Prior to the pre-work assessment, the contractor must submit a comprehensive HSSE Plan for review and approval by PHE.

Occupational Health and Safety Performance

Evaluation and performance of OHS management are conducted periodically by measuring lagging indicators against established KPI targets, specifically by calculating the TRIR, which is reported monthly by the HSSE Function to the Board of Directors. The results of the 2025 OHS management evaluation and performance are presented in the following table. The TRIR calculation is performed using the OSHA Log 300 method based on 1,000,000 man-hours, with no workers excluded from the calculation. PHE's OHS performance measurement covers all workers across all working areas, including contractors.

Performance Metric	2025	2024	2023
Employee Fatalities	0	1	0
Contractor Fatalities	7	0	3
External Party Fatalities	0	0	0
Total Fatalities	**7**	**1**	**3**
Lost Time Incident (LTI) / Day Away From Work (DAFW)	6	9	5
Restricted Work Day Case (RWDC)	6	7	15
Medical Treatment Case (MTC)	19	14	24
First Aid Case (FAC)	77	88	84
Total Incident Recorded	**115**	**119**	**131**
Near Miss Incident	157	264	225
Unsafe Act (UA)/Unsafe Condition (UC) Incident	1,228,722	1,383,799	1,449,261
Number of Accidents (NoA)	7	1	3
Process Safety Events (PSE) Tier 1	4	6	3
Process Safety Events (PSE) Tier 2	10	11	5
Process Safety Events (PSE) Tier 3	1,557	1,562	1,350
Manhours	322,627,734	326,965,407	333,788,230
Total Safe Manhours	7,000,000	43,000,000	57,600,000
Total Recordable Injury Rate (TRIR)	0.12	0.09	0.14

Number of Accidents

- Number of fatalities (excluding third-party fatalities)
- Number of severe safety process incidents, including:
  - ◊ Resulting in third-party fatalities (the public)
  - ◊ Major oil spill (≥10 KL)
  - ◊ Major property damage (≥ USD5 million)

  (excluding incidents resulting from third-party negligence, sabotage, and criminal acts based on investigation findings)

PSE Tier 1

- Fatality & LTI
- Community Evacuation & Hospital Admission
- Loss of Primary Containment (LOPC) ≥ Tier 1 Threshold
- Property Damage ≥ $100,000

PSE Tier 2

- RWDC & MTC
- LOPC ≥ Tier 1 threshold
- Property damage ≥ $2,500

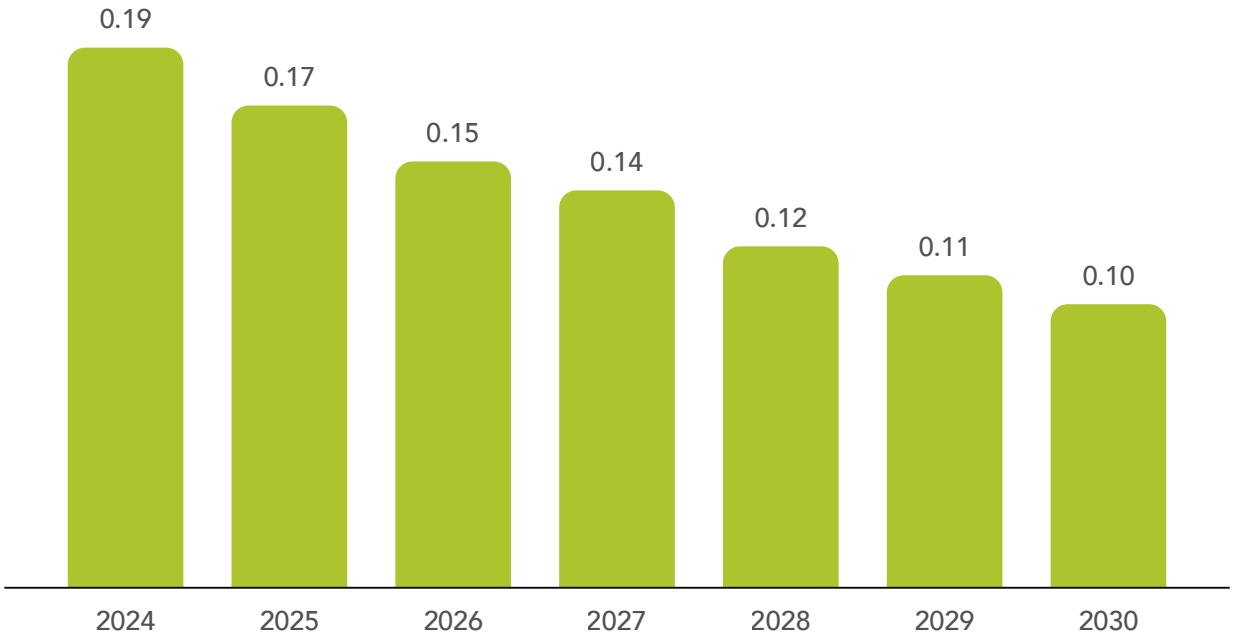

PSE Tier 3

- LOPC < Tier 2 threshold
- Property damage < $2,500

Occupational Safety Target

PHE Subholding Upstream has set annual TRIR targets until 2030 as shown below. These targets also apply to contractors.

Annual TRIR Targets

Key Performance Indicators (KPI) of HSSE Function

VP HSSE has several key performance indicators (KPI) as the basis for work performance evaluation and compensation. KPIs which are related to health and safety performance include several indicators as follows.

Leading indicators:

1. HSSE Culture Improvement
2. Management of Process Safety & Asset Integrity Management (PSAIM) under collaboration between Asset Integrity function and HSSE directorate (HSSE directorate is responsible for process safety performance)
3. Safety Compliance Assessment for operations cooperation partners (KSO)
4. Implementation of risk management for HSE aspects
5. Business Continuity Management System (BCMS) surveillance activities under the collaboration of Risk function and HSSE directorate (HSSE directorate manages aspects related to health and safety)
6. Crisis Management Team (CMT) activation simulation

Lagging indicators:

1. HSSE Excellence that consists of TRIR and Employees Fitness Status metrics
2. Number of Accident (NoA)

2.2 Strengthening Community Relationships

Human Rights Policy

The implementation of human rights within the Subholding Upstream is governed by the Policy on Safeguarding Human Rights in Pertamina Hulu Energi's Business, which was drawn up with reference to fundamental rights in the workplace as set out in the eight Core Conventions of the International Labour Organisation (ILO). Other references include the principles of the United Nations Guiding Principles on Business and Human Rights (UNGP), the United Nations Global Compact (UNGC), and the United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP).

We regularly monitor the implementation of our human rights policy through several mechanisms, including human rights due diligence based on the indicators in the Business and Human Rights Risk Assessment (PRISMA) from the Ministry of Human Rights. The due diligence covers all (100%) business processes within the Subholding Upstream, resulting in a score of 111 and a 'Green' rating. During 2025, the Company did not face any allegations of human rights violations.

Human rights is also incorporated into the KPI of the Vice President of Human Capital (HC) at PHE through the Human Capital ESG Sustainability Program, which is one of the strategic initiatives of HC Subholding Upstream. The program aims to ensure the implementation of human rights aspects at PHE in accordance with applicable regulations, with an annual target of 100%. Performance is measured based on the weighted average of the established performance parameters, with achievement assessed based on the completion of activities in accordance with the predetermined timeline.

One of the components of the program is the HC ESG Initiative, which covers the preparation of HC-related data and documents to support the ESG assessment process. In addition, the implementation and monitoring of human rights aspects are carried out through a number of activities with established completion timelines. These activities include:

Timeline	Activities
31st of May 2026	Socialization of PHE's Respectful Workplace Policy
30th of June 2026	Delivery of SDG 5 & 8 Campaign Materials
30th of June 2026	Preparation of the ESG Report on HC Aspects for Q1 2026
31st of August 2026	Broadcast of PHE's Respectful Workplace Policy
31st of August 2026	Preparation of the ESG Report on HC Aspects for Q2 2026
30th of November 2026	Preparation of the ESG Report on HC Aspects for Q3 2026
31st of December 2026	Implementation of the RWP Implementation Survey through the Employee Satisfaction Index

In addition, PHE also monitors its human rights performance, as measured by the activities carried out in accordance with the timeline below.

Timeline	Activities
30th of June 2026	Compilation of Accounts of Human Rights Implementation in the Sustainability Report Year Book 2025
31st of August 2026	Renewal of Human Rights Policy Document by Top Management
30th of September 2026	Broadcast Human Rights PHE
31st of December 2026	Survey on the Implementation of Human Rights in the Employee Satisfaction Index

Performance is assessed based on the timeliness of activity completion. Activities completed within the established timeline are assigned 100% realization, while earlier completion may result in higher realization and delays result in a corresponding reduction in performance. The KPI is monitored annually, with supporting evidence including document submissions, broadcasts, documentation, attendance lists, and socialization invitations. It serves as one of the mechanisms for measuring the implementation of human rights within the Subholding Upstream.

These efforts to strengthen human rights implementation are also supported through training provided to employees and leaders at various levels, including staff, managers, senior managers, VP, directors, and commissioners. These programs include Industrial Relations for Leaders Training, IR for Non-HR (Mobile Learning), LMS: Respectful Workplace 2025, and VPSHR (Voluntary Principles on Security and Human Rights). In 2025, these human rights-related training programs were attended by a total of 12,723 participants.

As of the end of 2025, PHE incorporated a human rights clause into contracts with third parties, requiring the upholding of human rights and non-discrimination principles in the workplace, as well as support for efforts to foster a respectful workplace in accordance with the Company Regulations. PHE also ensures that work activities are conducted in accordance with its commitment to respecting and upholding human rights.

The Company's Human Rights Policy states a clause to prevent, reduce, and repair negative impacts toward human rights. We commit to respect human rights of indigenous communities that are affected by the Company's operational activities, including recognizing their customs and practices, avoiding involuntary resettlement, as well as protecting culturally sensitive areas.

Respectful Workplace Policy

Through its latest Respectful Workplace Policy applicable in 2026, PHE Subholding Upstream is committed to establishing an inclusive and productive workplace to support corporate sustainability and reinforce its commitment to respecting and upholding human rights. The Respectful Workplace Policy requires the Board of Directors and all employees to uphold the principles of non-discrimination and a workplace free from violence and harassment. The policy prohibits discrimination based on ethnicity, race, nationality, colour, religion, sex, age, and disability in employment-related activities, including recruitment and selection, performance review, training and development, compensation and benefits, promotion/demotion, and workplace social interaction, in accordance with ILO Convention No. 111 concerning Discrimination in Employment & Occupation.

The policy also prohibits unacceptable behaviours, practices, or threats that may result in or are likely to result in physical, psychological, reputational, dignity, sexual, or economic harm, including gender-based violence and harassment in physical, verbal, non-verbal, visual, or emotional forms, in accordance with ILO Convention No. 190 concerning Violence & Harassment in the World of Work.

All employees are required to report discrimination, violence, and harassment through dedicated company channels, with reported cases investigated and sanctioned in accordance with Company policy, up to employment termination. PHE Management and the management of subsidiaries/affiliates are responsible for exemplifying, socializing, and implementing the Diversity, Equality and Inclusion Policy across the Subholding Upstream environment, including for employees, partners, customers, and other stakeholders.

To support a workplace environment free from violence and conflict across PHE, PHE carried out various campaigns and awareness-raising activities throughout 2025, including RWP socialization through Regional and Zone Human Capital (HC) teams, fraud prevention, podcasts featuring RWP experts, and socialization activities conducted in collaboration with Agent of Change (AOC) and Pertiwi. These collaborations included the internalization of the RWP program to prevent the erosion of positive Living Core Values (LCV), as well as activities addressing mental health. In addition, PHE activated PSYCARE counseling services for victims of RWP violations within the Subholding Upstream. These initiatives also formed part of the achievement of the PHE VP Human Capital KPI.

Respectful Working Place Campaign at PHE Subholding Upstream

Beyond these awareness-raising and preventive efforts, PHE also monitors and follows up on complaints reported through the Respectful Workplace Policy (RWP) mechanism. In 2025, a total of 38 RWP-related cases were reported within the Subholding Upstream. As of September 2026, 28 cases, equivalent to 74% of the total reported cases, had been resolved. The monitoring and follow-up of reported cases support PHE in maintaining the implementation of the RWP and addressing reported concerns in the workplace.

Security Operations

PHE Subholding Upstream has a Code of Conduct (CoC) that must be complied with by all employees, business partners, and contractors, including security service providers. For each security service provider, PHE provides a Security Service Provider Contract that includes clauses on compliance with the Company's CoC, prohibition of bribery practices, as well as compliance with anti-corruption, anti-money laundering, protection of human rights, and other relevant laws in the Republic of Indonesia. PHE assesses the performance of security service providers, covering HSSE performance, ethics (implementation of the Code of Conduct), operational performance, management and administration performance, and compliance with security personnel competency standards.

Security operations implemented by the Company are in accordance with the Security Management System which is regulated at national level under National Police Chief Regulation No. 7 of 2019, which also refers to the security standards for national vital objects as set out in Presidential Decree No. 63 of 2004, whereby responsibility for day-to-day operational security lies with the internal managers of national vital objects, whilst the Indonesian National Police (Polri) is obliged to provide assistance on security, law enforcement, and conduct of audits.

PHE deploys Security Guard (*Satpam*) from Security Service Companies (BUJP) who have attained the relevant Security Guard qualifications (*Gada Pratama, Gada Madya, Gada Utama*), having undergone basic training which includes orientation on human rights. Furthermore, to support security operations at PHE, all Security Guard personnels have been granted limited authority and issued with Security Guard Member Cards (KTA) by Polri. In carrying out security activities, the strategy implemented by PHE - in accordance with the Security Management Guidelines - prioritises preemptive and preventive measures whilst upholding the protection of human rights. BUJP as the security service provider has also obtained operational licences from the Indonesian National Police as the basis for the provider's operational compliance. By the end of 2025, the Upstream Subholding had 8,377 Security Guard, of whom 8,164 (97%) held Security Guard certification.

PHE Subholding Upstream has also established security partnerships with the Indonesian National Armed Forces (TNI) and the Polri to support security operations within PHE's operational areas. To ensure the protection of human rights within PHE's operational areas, all TNI and Polri personnel have received awareness sessions or training on human rights. During the 2025 period, there were no incidents of human rights violations committed by Security Guards, TNI personnels, or Polri officers assigned across all of PHE's operational areas.

Local Suppliers

For various procurement needs, PHE consistently works in collaboration with local partners. Local business partners refer to domestic and national business entities that operate in Indonesia. The presence of local business partners creates more employment opportunities for communities, including residents living around the working areas.

PHE also supports the capacity development of local suppliers by facilitating requirements for local suppliers through the PaDi UMKM portal, including to help them meet the Company's procurement standards. Small-scale procurement is carried out via the PaDi UMKM platform and targets local suppliers at city or regency level or smaller. For low-risk service tenders with a budget of less than 10 billion Rupiah, the involvement of local suppliers at provincial level is mandatory. From September 2026, in accordance with amendments to the

regulations on the procurement of goods and services, this local supplier policy will apply to low-risk service tenders with a value of less than 50 billion Rupiah.

During 2025, the Company engaged 3,005 business partners. Of the total business partners registered with the Company, 2,848 were local business partners (Domestic Companies/PDN), accounting for 94.78%, whilst national business partners numbered 153 (5.09%) and international business partners numbered 4 (0.13%). The total value of procurement contracts for local business partners in 2025 reached USD5,340.28 million, or 99.87% of the total value of procurement contracts. This amount decreased by USD1,711.40 million, or 24.27%, from USD7,056.14 million in 2024.

Developing High-Achieving and Prosperous Workers

PHE provides equal opportunities for every individual, including local workers defined as residents living near working areas to participate in the recruitment process for new workers. Specifically for business partners, including contractors/vendors/suppliers, the Company encourages the involvement of local workers, particularly for roles that do not require specialized skills or competencies.

In implementing this approach, PHE engages both skilled and unskilled resources through recruitment at local to national levels, with opportunities for local communities to participate according to the requirements of each position. In 2025, more than 95% of unskilled resources recruited through PHE's local contractors were sourced from communities surrounding the company's working area's. For skilled positions, PHE facilitated local recruitment through the Technician Expertise Guidance Program (Integrated Special Job Market or *Bursa Kerja Khusus Terpadu* / BKJT), through which 9.38% of PHE's new hires in 2025 were recruited from local communities. These initiatives reflect the Company's efforts to expand access to employment opportunities for communities surrounding its operations while fulfilling workforce requirements across different levels of competency.

In addition to supporting local employment, PHE also continues to develop its workforce in line with emerging needs associated with climate change mitigation. In 2025, 12 employees were assigned to the CCS/CCUS development project, representing one of PHE's strategic initiatives to support support carbon emission reduction.

Through these initiatives, PHE continues to foster a capable and adaptable workforce that can respond to evolving operational requirements while contributing to the Company's long-term business priorities, including the transition toward lower-carbon energy.

Potential Impacts of New Working Areas on Communities and Its Management

In 2025, PHE became the operator of new oil and gas exploration working areas (WK) including WK Binaya in Maluku and WK Lavender in South and Southeast Sulawesi. In June 2026, PHE also conducted geophysical survey activities in the Jatibarang Working Area (WK) as part of the development of new wells. PHE's operational activities in these areas have the potential to cause negative impacts, which must be managed effectively to ensure no detrimental effects on the surrounding communities.

In developing its new working areas and facilities, PHE engages with stakeholders progressively, taking into account the stage and scale of the planned activities, as well as the relevant stakeholders and those who may potentially be affected. At the early stages of development, engagement focuses on socialization and coordination with local governments and relevant institutions. As activities progress and plans become more specific, engagement extends to communities surrounding the activity locations, particularly those who may have direct interaction with or be potentially affected by the activities.

This approach was reflected in PHE's activities in 2025. In the Binaiya and Lavender Working Areas (WK), which were still at the early stages of development, PHE has been socializing its planned activities with local

governments, including governor and community/village head level. Meanwhile, in existing Working Areas with new facility openings such as Jatibarang, community engagement was carried out in line with more specific activity plans, including through the socialization of geophysical surveys for field development and the addition of new wells.

Socialization and community engagement activities in the Jatibarang Working Area (WK), Indramayu

Accordingly, stakeholder engagement is tailored to the level of specificity of each activity and the relevant stakeholders involved at each stage, with information and communication provided prior to implementation. The process also includes obtaining the necessary permits from local governments and efforts to establish a social license to operate, in line with the application of the Free, Prior and Informed Consent (FPIC) principle in the development of PHE's Working Areas.

Potential Negative Impacts on Communities

Environmental

- Water, soil, and air pollution
- Risk of oil spills
- Ecosystem damage

Social

- Land conflicts with local communities
- Economic disparities (not all communities benefit equally)
- Changes to local cultural practices

Health

- Respiratory issues due to air pollution
- Risks from hazardous waste if not properly managed

Impact Management

Environmental Management

- Environmental Impact Assessment (AMDAL).
- Waste treatment (water, drilling mud, gas) to ensure compliance with quality standards in accordance with applicable laws and government regulations.
- Site restoration: post-operation reclamation and reforestation.

Community Engagement

- Socialization prior to operations.
- Community involvement in decision-making processes.
- Social assessment, as part of the AMDAL, covering aspects such as livelihoods, income, educational levels, and accessibility. The assessment also captures the public's perceptions of environmental quality (such as dust, air pollution, and water pollution) and their expectations (such as employment and business opportunities).

Health, Safety, & Environmental (HSE) Management

- Implementation of Health, Safety, and Environment (HSE) standards.
- Accident risk mitigation.
- Environmental quality monitoring.

Regulation & Oversight

- In Indonesia, upstream oil and gas working areas are supervised by SKK Migas and the Ministry of Energy and Mineral Resources.
- Key regulations include:
  1. Law No. 22 of 2001 on Oil and Gas.
  2. Law No. 6 of 2023 on the Stipulation of Government Regulation in Lieu of Law No. 2 of 2022 on Job Creation.
  3. Government Regulation No. 35 of 2004 on Upstream Oil and Gas Business Activities.
  4. Government Regulation No. 34 of 2005 and Government Regulation No. 55 of 2009.
- Continuous coordination with SKK Migas and the Ministry of Energy and Mineral Resources as supervisory authorities for upstream oil and gas operations and environmental management.
- Compliance with the eight directives of the President Director of PERTAMINA:
  1. Implementation of HSSE Golden Rules.
  2. Enhancement of competency and safety culture.
  3. Supervision and assurance of critical activities.
  4. Readiness of critical equipment (ISECE).
  5. Planned inspection and maintenance.
  6. Strengthening CSMS implementation.
  7. Incident reporting and learning culture.
  8. Emergency preparedness and crisis management.

Formal Engagement and Grievance Channels

The Company provides grievance mechanisms for communities to raise concerns related to the impacts of operational activities and the implementation of community empowerment programs through the website pcc135@pertamina.com and the 135 call center, which are accessible across all Pertamina's operational areas, including PHE as a subsidiary, while ensuring the confidentiality of reporters' identities and the information submitted. Each grievance is forwarded to the relevant parties for follow-up in accordance with the subject matter of the complaint. In 2025, the Company received community grievances related to environmental impacts associated with water quality management and protection.

Moreover, PHE Subholding Upstream also constantly strives to meet the needs of and address the concerns of local communities in the areas surrounding its operations. These efforts are implemented through a community-engagement approach tailored to the specific needs at hand. This engagement is addressed through public consultation and *musrenbang* (development planning meeting). The *musrenbang* is held as required to foster effective and transparent communication.

Through a combination of formal grievance mechanisms such as the Pertamina Contact Center 135 and public consultation forums, PHE Subholding Upstream provides avenues for communities to raise their concerns, aspirations, and needs, which can subsequently be followed up in accordance with the applicable mechanisms.

Social Investment

The social contributions of PHE Subholding Upstream are broadly divided into philanthropy and community development. Philanthropy refers to expenditure on donations and contributions to charities, non-governmental organisations and research institutions; these contributions are not related to the Company's commercial research and development. Community development also covers infrastructure development costs for facilities that can be utilized by the community, as well as funding for CID and other social programs.

Social Investment		Social Investment Expense in 2025 (million USD)
Philanthropy	Donation	1.79
	Contributions to charities, non-governmental organization (NGO) and research institutions	0.05
Community Development	Infrastructure Development	21.12
	Community Involvement & Development (CID) Programs	9.10
	Other programs	1.32
Total		**33.38**

Community Development Expenditure as a Percentage of Profit

Component	2025	2024	2023
Total Community Development Expenditure (million USD)	31.54	20.03	12.84
Profit (million USD)	2,175.49	3,121.03	2,725.54
Percentage relative to profit	1.45%	0.64%	0.47%

Philanthropic Programs

PHE Subholding Upstream provides philanthropic support through various forms of donations to contribute to social and community initiatives. These contributions include sponsorships for social and community activities, recurring assistance to religious institutions, as well as support for communities affected by disasters. In December 2025, for example, PHE provided emergency assistance to communities affected by floods and landslides across several areas in Sumatra. The assistance was distributed through PHE's operating areas and coordinated with local governments and regional disaster management agencies (BPBD) to help ensure that support reached affected communities in a timely and targeted manner. The assistance included essential food supplies, drinking water, baby food, personal hygiene items, blankets, and other basic necessities to support communities during the emergency response period.

PHE's Participation as a Sponsor at IPA Convex 2026

Earlier in March 2025, PHE WMO, in collaboration with SKK Migas and the local government, also provided assistance to communities affected by flooding in Blega District, Bangkalan Regency, East Java. The assistance was provided as part of PHE WMO's social and community support activities during the Ramadan period and was directed to communities affected by the flood. These initiatives illustrate the Company's philanthropic contributions in responding to community needs arising from disaster events, including through coordination with relevant stakeholders in the affected areas.

PHE's emergency assistance to communities affected by floods and landslides in Sumatra

In addition to providing direct assistance, PHE also extends its philanthropic support through contributions to charitable organizations, non-governmental organizations, and research institutions based on submitted proposals. Such contributions may support activities such as workshops, public outreach, and other non-commercial initiatives

aligned with the Company's vision. PHE also provides sponsorship support to institutions and activities whose objectives are relevant to the Company, including initiatives organized by universities and cultural institutions. Such sponsorships may support the implementation of relevant activities while providing corporate visibility through, among others, the placement of the Company's logo in event materials.

SKK Migas and PHE WMO met with Bangkalan Regent Lukman Hakim at the Bangkalan Regency Government Office regarding assistance for communities affected by flooding.

Infrastructure Development

PHE Subholding Upstream provides support to communities through infrastructure development assistance intended for community use and subsequently handed over to communities surrounding its working areas. This support aims to help address community needs and support activities across various areas, including the economy, healthcare, education, religious activities, and youth development, thereby creating sustainable benefits for communities surrounding the working areas. In 2025, this support was realized through the development of various community infrastructure facilities.

One form of this support is the construction of an access bridge to the Floating State School in Tani Baru Village, within the operational area of Pertamina Hulu Mahakam. The bridge is expected to facilitate the mobility of students, teaching staff, and the surrounding community, particularly in accessing educational facilities in a safer, more adequate, and sustainable manner. Besides supporting the smooth running of teaching and learning activities, this infrastructure is also part of the Company's commitment to promoting equitable access to education, particularly for communities in coastal and water-based areas facing geographical challenges. Through the construction of this bridge, the Company aims to deliver tangible benefits to the community whilst strengthening the contribution of the CID programme in supporting improved quality of life and social development in the areas surrounding its operations.

Such infrastructure development support also extends to the agricultural sector. In 2025, PT Badak NGL provided assistance for the construction of artesian wells in the agricultural sector as part of its support for improving local community productivity and food security. The program was introduced to address water availability challenges, which often become a major constraint for farmers, particularly during the dry season when irrigation water supplies are limited. Through the provision of more stable and sustainable water access,

the artesian well assistance in Gunung Elai Subdistrict, North Bontang District, Bontang City, East Kalimantan is expected to support agricultural activities, maintain planting continuity, and reduce the risk of crop failure caused by water shortages. In addition, the program aims to encourage farmers' independence in managing agricultural resources more effectively and productively. With the availability of such supporting infrastructure, the local agricultural sector is expected to become more resilient, adaptive to climate change, and capable of making tangible contributions to sustainable regional food security. The program also reflects PT Badak NGL's commitment to delivering direct and meaningful benefits to communities surrounding its operational areas.

In addition, in 2025, Pertamina Drilling Services Indonesia (PDSI) provided educational facility improvement assistance to MI Miftahul Ulum Islamic Elementary School in Kaplongan Village, Kedokanbunder District, Indramayu Regency, West Java, located near the Indonesia Drilling Training Center operational area. The assistance included the construction of two toilet units as well as repairs to damaged classrooms and school facilities. This program reflects the Company's commitment to supporting the improvement of education quality through the provision of a more adequate, safe, and comfortable learning environment. Through this support, PDSI aims to deliver tangible benefits for students, educators, and surrounding communities, while strengthening the Company's contribution to sustainable social development within its operational areas.

In Muara Village, Karawang, students of PAUD Aster no longer need to walk two kilometers to attend school. From studying in a cramped room inside a resident's house, they now have a "second home", a classroom created through the revitalization and repurposing of a former integrated junior high school building initiated by PHE ONWJ. Since 2024, the Company has supported the education of PAUD Aster students by providing study desks and educational games that spark imagination. Every smile from these children reflects how investment in early childhood education plays an important role in nurturing future generations and developing outstanding human capital for the nation.

Community Involvement & Development Programmes

The implementation of the CID programme at PHE Subholding Upstream is based on the ISO 26000 Social Responsibility standard. The CID programme comprises seven pillars: community engagement; education and culture; job creation and skills development; technology development and access; wealth and income generation; health; and social investment.

Throughout 2025, there were 806 Community Involvement & Development (CID) programmes that engaged and empowered communities within the Subholding Upstream's operational areas. Some of these were follow-on programmes that had been implemented in 2024, whilst others were new programmes developed in line with previously assessed indicators. The following are some examples of flagship CID programmes.

1. Beeyond Honey

Beeyond Honey is an integrated social innovation initiative launched by PT Pertamina Hulu Energi Jambi Merang (PHE Jambi Merang) as part of the company's Corporate Social Responsibility (CSR) commitment. The programme is based in Suka Maju Village, Geragai Sub-district, Tanjung Jabung Timur Regency, an area characterised by peatland ecosystems and agroforestry that are vulnerable to environmental degradation and forest and land fires (karhutla). Beeyond Honey was launched in response to the decline in bee populations (pollinator decline), which has a direct impact on food security, ecosystem balance and the sustainability of local livelihoods.

Environment

- Planting of **2,000 plants of 14 different species** as a source of bee forage
- Management of **4 hectares** of land previously prone to forest and land fires (karhutla) to be converted into a honeybee farming area
- Reduction in GHG emissions of **9.3 tonnes of CO_2eq,** equivalent to environmental economic benefits of **Rp620.86 million**

Economy

- Empowerment of **17 community members** (housewives and young people in MSME groups and cooperatives)
- Increase in additional income of between **Rp600,000 and Rp2 million** per month from honeybee farming
- Increase in income of between **Rp250,000 and Rp500,000** per month for MSME groups
- **6 honey-based products** marketed locally
- Electricity cost savings of **Rp7.44 million** per year through the use of solar energy

Well-being

- Provision of education on bee ecosystems and environmental conservation to around **300 community members and school pupils**
- A total of **25 participants** have acquired skills in beekeeping, post-harvest processing and business management
- Optimisation of the work of **20 members of the 'Masyarakat Peduli Api'** (Community Concerned about Fire) through the use of beekeeping as an environmental bio-indicator

Society

- The establishment of **two** organisations: the **Sukma Jaya Cooperative and a group of MSMEs** specialising in honey-based products
- Multi-stakeholder collaboration involving the government, educational institutions, community organisations and the private sector

2.Sikok Selingkar

PT Pertamina EP Prabumulih Field developed a series of community empowerment initiatives through the Sikok Selingkar Program (Organic Rubber Community System within a Circular Recycling Chain). The program was initiated in response to several issues, including suboptimal waste management, White Root Fungus disease attacks, and the large amount of abandoned land in Prabumulih. In response to these conditions, the Sikok Selingkar Social Innovation Program offers solutions through innovations in organic and inorganic waste management across 3 sub-programs: MOKUSAKU (Capital from Wood, Less Waste), RINDU RESIK (Innovation House for Recycling Inorganic Residual Waste), and MUDA BERSAMA (Empowered Women, Managing Waste Together). For organic waste management, the program utilizes onion waste containing auxins, gibberellins, and cytokinins, which are processed into extracts and mixed with local microorganisms (MOL) to produce a natural plant growth regulator. Meanwhile, residual plastic waste is processed into rubber latex drip protectors. This approach demonstrates the principle of "empowering the problem to solve the problem".

Environment

- Management of 1,048 tonnes of inorganic waste and 1,825 tonnes of organic waste, contributing to a reduction of 562.03 tonnes of CO_2eq emissions per year
- Replacement of 33,168 liters of chemical plant growth regulators (PGR) per year with the environmentally friendly SEREPAT innovation
- Optimization of 1.04 hectares of land into productive farmland for women farmer groups

Economy

- Annual revenue of Rp539 million from inorganic waste management groups and Rp310 million from organic waste management groups
- Cost efficiency through savings of Rp14.8 million per year from reduced purchases of chemical plant growth regulators
- Operational cost efficiency of up to Rp10 million per year for community groups

Well-being

- Creation of 10 new jobs for local communities
- Direct benefits provided to 131 people from vulnerable groups
- Collaboration with 11 inclusive stakeholders, including unemployed groups
- 55 rubber farmers protected from the risks associated with agrochemical use

Society

- Direct benefits provided to 55 groups and indirect benefits reaching 7,531 people
- Active involvement of 51 elderly women in the program
- Establishment of 2 policies and 2 strategic partnerships supporting program development

3. Rumah Kreatif Boek Khaman

The *Rumah Kreatif Boek Khaman* programme is a social innovation based on local potential, developed by PT Pertamina EP Limau Field in Lubuk Raman Village, Muara Enim Regency, in response to interrelated environmental and social issues. Before the programme was launched, the village faced challenges such as bamboo waste being burnt in the open, batik wastewater being discharged without treatment, limited economic access for vulnerable groups, and community activities that were still carried out in isolation without a sustainable system of collaboration. Through a social innovation approach, this programme integrates the management of bamboo waste and batik wastewater into a single community-based circular economy system. Bamboo waste is processed using pyrolysis technology to produce biochar and liquid smoke, whilst batik wastewater is treated using a Hybrid Constructed Wetland (HCW) system with bamboo biochar as the filtration medium.

Environment

- Utilisation of **5.4 tonnes of bamboo waste**, contributing to a reduction in GHG emissions of **6.75 tonnes of CO_2eq** per year
- Utilisation of **0.063 MMSCFD of excess gas**, contributing to a reduction in emissions of **1,542.84 tonnes of CO_2eq** per year
- Wetland-based water management of **28.6 m³** per year
- Utilisation of **45.7 kg of sewage sludge** per year as a recycled dye
- Application of biochar to an area of **6 m²**

Economy

- Increase in income: the Khuas Buloh Group by **Rp1.6 million** per month, the Batik Khaman Group by **Rp1.1 million** per month, and the KWT Khaman by **Rp971,000** per month
- Water savings from PDAM amounting to **Rp215,000** per month
- Reduction in LPG costs amounting to **Rp330,000** per month

Well-being

- **47 members from 3 groups** have acquired skills in treating batik and bamboo wastewater
- Direct benefits provided to **18 individuals** from vulnerable groups
- Expansion of the educational impact to more than **300 participants** (pupils, teachers and the general public)

Society

- Institutional strengthening through collaboration between three groups
- Support from **nine strategic partners** from government, academia and civil society organisations
- Empowerment of **47 people** through regular cross-group activities

4. PURNAMA SUBANG (Empowered Former Indonesian Migrant Workers Working Together to Protect the Environment)

The PURNAMA SUBANG programme (Empowered Former Indonesian Migrant Workers Working Together to Protect the Environment) was implemented in Compreng Village, Subang Regency, an area known as a hub for migrant workers with a population of 4,135 former Indonesian migrant workers (PMI). The village faces structural challenges in the form of limited local economic opportunities, which have led to high rates of irregular labour migration. The village's initial situation was characterised by significant social vulnerability, as many former migrant workers returned to their home villages without skills relevant to market needs, experienced social alienation due to having been away from the village for a long time, and were heavily reliant on remittances, which were often spent on consumption rather than becoming productive capital. Furthermore, the children left behind faced psychosocial issues due to a lack of parental care. These problems are exacerbated by urgent environmental degradation, namely the pollution of rivers and irrigation channels caused by the accumulation of unmanaged baby nappy waste and household waste, as well as conventional mango farming practices that are inefficient, costly and low in productivity, which further undermine the economic resilience of local farmers.

Environment

- Management of **3 tonnes of animal manure**, **6.06 tonnes of organic waste**, **562 litres of used cooking oil** and **7.83 tonnes of nappy waste** per month
- Conversion of waste into biogas amounting to **75–120 m³** per month, contributing to a reduction in carbon emissions of up to **0.73 tonnes of CO_2eq** per year
- An additional reduction in carbon emissions of **70.66 kg of CO_2eq** per year

Economy

- The Swarna Integrated Farming Group's income is **Rp705 million** per year
- The Sahabat Purnama Group's income is **Rp667 million** per year
- The Jaga Bumi Lestari Group's income is **Rp357 million** per year
- Savings on LPG, fuel, agricultural operating costs and electricity amount to **Rp16 million** per year

Well-being

- Capacity and skills development for **62 women** through the management of the Warung Pojok Sahabat business, mango cultivation using the UHDP system, and the processing of waste into value-added products
- Enhancement of knowledge through school- and community-based educational activities for more than **3,500 individuals**
- Poverty alleviation for **24 heads of households**
- Increased income for older people, female heads of households, and people with disabilities
- Community satisfaction with the programme, with an IKM score of **89.5** (classified as 'Very Good')

Society

- Case support for **45 women**
- More than **1,000 women** gained access to services and information
- Reading corners for **350 children**
- The formation and development of groups and cooperatives, involving a total of more than **100 active members**

5. Prabu Kresna Programme – An Agricultural System that is Resilient to and Adaptive to Climate Change (SETIAKI)

The SETIAKI programme forms part of the Prabu Kresna Community Empowerment programme in Rahayu Village. Looking ahead to 2025, the programme's focus is on strengthening farmers' capacity to adapt to extreme weather by improving their climate analysis skills. The integration of farmers' local knowledge with climate statistics from the BMKG enables the planning of more accurate, effective and efficient planting seasons, thereby reducing uncertainty in agricultural decision-making. Efforts to mitigate and adapt to climate change are also being strengthened through the optimisation of organic farming and the diversification of farming activities via the development of hydroponic melon cultivation.

Environment

- Improvement in land quality through a reduction in the use of chemical fertilisers by **400 kg** per growing season across **10.8 hectares of paddy fields**
- Application of **5–6 tonnes** of organic fertiliser per hectare
- Water savings of up to **4,800 m³** per hectare per season and expanded access to irrigation for **27 hectares** of agricultural land, with total irrigation water efficiency reaching **40%**
- The adoption of organic farming, contributing to a reduction in carbon emissions of approximately **2.46 tonnes of CO_2eq** per month
- Utilisation of renewable energy through a solar power plant, resulting in an additional emission reduction of **1,338.4 kg CO_2eq** per year
- **Improvement of the rice field ecosyste**m through increased populations of natural predators, improved water quality (TDS 472 mg/L), and agricultural diversification such as medicinal plants, organic vegetables and hydroponic melon cultivation

Economy

- A **15.8% reduction** in agricultural production costs, equivalent to **Rp2.8 million** per hectare per season, with cropping frequency increasing from once to three times a year
- An increase in rice productivity from **3–4 tonnes to 6–9 tonnes**
- An average increase of **24%** in the income of **128 farm labourers**
- An increase in the income of **35 land-owning farmers** by up to 14-fold, reaching **Rp43.7 million** per hectare per season
- A **33.48%** increase in net profit
- The establishment of **three new business units** in the fields of hydroponics, herbal products and drinking water

Well-being

- Providing access to clean water that meets quality standards for **1,017 households**
- Raising public awareness of healthy and sustainable lifestyles

Society

- Establishment of one new cross-regional institutional network: the **Tuban-Bojonegoro Organic Farmers Forum** (61 farmers from 5 villages)
- A **26% reduction** in youth unemployment among members of the Karang Taruna youth organization through the formation of youth farmer groups
- Women's empowerment through the Dewi Sri Herbal Group, which has **21 active members**
- Natural pest control through the allocation of village communal land and the use of owl houses
- An IKM score of **3.39**, categorized as "Very Good"
- Reactivation of the Rahayu Jaya Sentosa Village-Owned Enterprise (BUMDes)
- Increased social cohesion
- **Two new village government policies** allocating village communal land (TKD) and the use of owl houses (RUBUHA)

6. Integrated Coastal Tourism Development Program (Tlangoh White Sand Beach) - RESAPI (Ecosystem Rehabilitation, Coastal Action Synergy & Innovation)

PHE WMO is aware of the coastal erosion occurring in Tlangoh Village, which is located very close to the company's production facilities. The Tlangoh White Sand Beach Program has transformed a landfill into Bangkalan's first tourist attraction, repurposed the company's non-hazardous waste (steel plates) to create Hexa Reefs to combat coastal erosion, converted the erosion zone into an educational zone, and engaged former migrant workers as tourism and conservation stakeholders. The implementation of the RESAPI Innovation has targeted vulnerable groups, including former migrant workers, out-of-school children, unemployed youth (seasonal workers), fishermen, women—particularly widows—farmers, coastal communities, and the elderly. These vulnerable groups have subsequently received capacity-building support as part of efforts to transform their ownership of assets and capital, starting with intellectual capital through the construction of Hexa Reefs and raft boats; individual capital through group institutional training; social capital through discussions on program plans—including annual work plans (Renja) and strategic plans (Renstra)—and the implementation of community service (gotong royong) to enhance social cohesion; infrastructure capital through the provision of facilities and infrastructure to support the development of coastal tourism areas; natural capital through tree planting and the utilization of organic waste; and cultural capital by conducting rokatase ceremonies to express gratitude to God Almighty for the bountiful blessings from the sea.

Environment

- **390 Hexareef units** were installed to prevent erosion
- Increased beach accretion of **1–5 meters** per year
- Reduction in illegal sand mining by **14,312 m³** over three years
- Reduction in waste generation by **543,236 m³** over three years
- Utilization of **50 kg** of organic waste and management of **1 metric ton** of inorganic waste per year
- Increase in biodiversity with the emergence of **20 colonizing** fish species

Economy

- Additional income for MSME operators of **Rp1.5 to Rp2.5 million** per month
- Revenue for the tourism awareness group (Pokdarwis) of up to **Rp24 million** per month
- Revenue from tourism activities in the Tlangoh Beach area of **Rp135 million** per month for the local community

Well-being

- A total of **46** direct beneficiaries, **65%** of whom are women
- Positive behavioral changes in community waste management practices in coastal areas
- CSI of **3.76**, categorized as **"Very Good"**

Society

- More than **25,000 visitors** to environment-based educational tourism destinations per year
- Encouraging returnees to contribute to tourism management
- Creating new job opportunities for at least **30 people**
- Shared value was created among **10 Tourism Awareness Groups** (Pokdarwis) in relation to coastal tourism management
- **9 migrants** returned to Tlangoh to participate in tourism management activities

7. Waste-Free Ocean for a Future-Fit Society - SOPAN TERI

Badak LNG initiated the Waste-Free Ocean for a Future-Fit Society social innovation program as an integrated system transformation effort through waste utilization, strengthening the local economy, and improving fisheries governance. In 2025, the program focused on downstream processing and post-harvest strengthening through SOPAN TERI, an anchovy drying technology innovation based on the use of waste heat from LNG industry operations, which has obtained a Simple Patent. The SOPAN TERI Program is a coastal management initiative based on a circular economy approach that integrates marine waste reduction, technological innovation, and community empowerment to create a sustainable and productive coastal ecosystem.

Environment

- Reduction of **22,738 kg** of aluminum waste generation, utilization of polyurethane waste contributing to emissions reductions of **740.05 tonnes of CO_2eq**, and an additional **570.60 tonnes of CO_2eq** from the optimization of other waste management practices
- Reduction of **16 thousand** plastic bottle waste from seaweed cultivation
- activities and processing of **4.8 tonnes** of anchovy waste, contributing to the reduction of additional emissions

Economy

- Improved income and strengthened community economic independence through the development of productive businesses based on local potential. The Telihan Recycle, Menara Marina, and Lestari Bahari groups recorded additional economic benefits from sales proceeds, group income, group cash reserves, and cost efficiencies, with a cumulative value reaching **Rp1,085,535,976**.

Well-being

- A total of **3 members** of Telihan Recycle have served as resource persons in waste segregation training, thereby supporting knowledge transfer to the community
- A total of **12 fishermen** have been able to operate sensor-based lift net technology to improve the effectiveness of fishing activities
- A total of **26 seaweed** farmers gained knowledge related to seed maintenance techniques to support the quality and sustainability of seaweed cultivation

Society

- A total of **36 marketing partners** across **4 provinces** established cooperation in propeller sales, supported by **5 stakeholders** acting as partners and consumers of polyurethane boats
- The program provided internship opportunities for **12 people** at Telihan
- Recycle and encouraged the involvement of **77 people** in cooperation for coastal commodity management at Lestari Bahari

Governance Foundation

3.1 Corporate Governance

Governance Structure and Mechanisms

The implementation of governance principles at PHE comprises two main aspects, namely the governance structure and governance mechanisms. These two aspects are interconnected, ultimately reflecting the desired governance outcomes.

The governance structure consists of the Company's organs or bodies, whether established to ensure compliance with applicable laws and regulations or created to meet internal needs for enhancing the implementation of Good Corporate Governance (GCG). Meanwhile, governance mechanisms encompass the series of processes, practices, rules, and institutions that influence the Company's overall management. These mechanisms include applicable laws and regulations, Standard Operating Procedures (SOPs), charters, and documents, as well as rules governing the relationships between the various organs or bodies.

The Company's governance structure involves key elements that support strengthened controls and management, aligning with the objectives of implementing governance principles. In accordance with Law No. 40 of 2007 concerning Limited Liability Companies, the organizational infrastructure of a Limited Liability Company includes the interests of Shareholders as outlined in the General Meeting of Shareholders (GMS); the Board of Directors with its management duties; and the Board of Commissioners whose function is to carry out supervision. The management system follows a two-tier model comprising the Board of Commissioners and the Board of Directors with clear authority and responsibilities assigned to each, as mandated by applicable laws, regulations, and the Company's Articles of Association. The Board of Directors serves as the management body, while the Board of Commissioners performs supervisory functions regarding the management activities carried out by the Board of Directors.

Stock Ownership

The major/controlling shareholder of PHE is PT Pertamina (Persero), a State-Owned Enterprise (SOE), which holds a direct 99.9968% stake in the Company and an indirect 0.0032% stake through PT Pertamina Pedeve Indonesia. PT Pertamina (Persero)'s shareholding consists of 99.99% Series B shares held by PT Danantara Asset Management (DAM) and 1 (one) Series A share held by the Government of the Republic of Indonesia. Pursuant to Government Regulation No. 41 of 2003 concerning the Transfer of the Position, Duties, and Authority of the Minister of Finance regarding State-Owned Enterprises (Persero), Public Enterprises (PERUM), and Government-Owned Enterprises (PERJAN) to the State Minister for State-Owned Enterprises, and Law No. 19 of 2003 on State-Owned Enterprises, as last amended by Law No. 16 of 2025 on the Fourth Amendment to Law No. 19 of 2003 on State-Owned Enterprises; the ultimate owner of PHE is the Ministry of State-Owned Enterprises (BUMN).

Based on the resolution of the Annual General Meeting of Shareholders for the 2024 Fiscal Year, which was held on June 13, 2025, the shareholders resolved:

- To allocate the Company's Net Income for Fiscal Year 2023, amounting to USD3,001,473,246, as follows:
  a. USD2,050,000,000 shall be distributed as dividends to the Company's shareholders, to be paid in cash.
  b. USD951,473,246 shall be retained as retained earnings, which may be used to meet mandatory reserve requirements or for development and operational activities.
- The schedule for dividend payments by the Company is as follows:
  a. Phase 1: USD1,500,000,000 no later than September 30, 2025.
  a. Phase 2: USD550,000,000 no later than December 31, 2025.
- Authorizes the Finance Directorate of PT Pertamina (Persero) to determine the currency mechanism—whether in U.S. Dollars (USD) and/or Indonesian Rupiah—for dividend payments that are optimal for the Company's shareholders.

As of December 31, 2025, PHE had issued 396,225,242,340 shares. The dividend per share for 2025 was 0.0052 USD per share. Through the end of 2025, PHE did not conduct any public offerings of shares and did not trade its shares. Anti-takeover provisions are set forth in the Company's Articles of Association, specifically in Article 7, paragraphs 1 through 7, which require that any transfer of share ownership must be based on a resolution of the General Meeting of Shareholders (GMS) and documented in a valid deed of transfer. Such transfers may only be made if all provisions of the Articles of Association have been fulfilled, thereby providing control over potential changes in ownership. Additionally, a change in control may trigger specific clauses in key agreements, such as financing agreements, strategic partnership contracts, and management contracts, which may require notification or re-approval. However, the company does not implement special shareholding structures such as golden shares or poison pill mechanisms as part of its anti-takeover measures.

Nomination Policy for the Board of Commissioners and Board of Directors

Members of the Board of Commissioners and Board of Directors are appointed and dismissed through a GMS. The legal basis for the appointment of members of the Board of Commissioners is:

- Law No. 40 of 2007 on Limited Liability Companies.
- Law No. 19 of 2003 on State-Owned Enterprises (including its explanatory notes).
- The Company's Articles of Association.
- Regulation of the Minister of State-Owned Enterprises No. PER-03/MBU/03/2023 on the Organization and Human Resources of State-Owned Enterprises.
- Guidelines for the Appointment and Dismissal of Members of the Board of Directors and Board of Commissioners of Subholdings or Subsidiaries No. A5.3-01/K20000/2024-S9 Revision 0 dated May 8, 2024.

The legal basis for the appointment of members of the PHE Board of Directors is based on:

- Law No. 40 of 2007 on Limited Liability Companies.
- Law No. 19 of 2003 on State-Owned Enterprises (including its explanatory notes).
- The Company's Articles of Association.
- Regulation of the Minister of State-Owned Enterprises No. PER-03/MBU/03/2023 on the Organizational Structure and Human Resources of State-Owned Enterprises.
- Guidelines for the Appointment and Dismissal of Members of the Board of Directors and Board of Commissioners of Subholdings or Subsidiaries No. A5.3-01/K20000/2924-S9 Revision 0 dated May 8, 2024.

The term of office of members of the Board of Commissioners and Board of Directors is set at 3 years and thereafter they may be reappointed for one further term of office. The termination of a member of the Board of Commissioners and Board of Directors at any time before their term of office expires must be conducted by the GMS by stating the reasons.

Organizational Structure

The management system of the Limited Liability Company adopts a two-tier system, consisting of the Board of Commissioners and the Board of Directors, with clear authorities and responsibilities in accordance with their respective functions as stipulated in laws and regulations as well as the Articles of Association. There are several committees under the Board of Commissioners, namely:

- Integrated Governance Committee
- Audit Committee
- Nomination and Remuneration Committee
- Investment & Risk Management Committee

Board of Commissioners Profile

Denny Januar Ali

President Commissioner concurrently serving as Independent Commissioner

Terms of Office: July 4, 2025 to present, 1st term

Age: 63 years old

Domicile: DKI Jakarta

Citizenship: Indonesia

Educational Background	• Doctor of Comparative Politics and Business, Ohio State University, United States (2001) • Master of Public Administration, University of Pittsburgh, United States (1994) • Bachelor of Laws, Universitas Indonesia (1989)
Employment History	• Chairman, Indonesian Writers Association (SATUPENA) (2022-present) • Chairman, Association of Indonesian Political Consultants (AKPI) (2009-present) • Chairman, Indonesian Public Opinion Research Association (AROPI) (2007-2013) • Executive Director, Lingkaran Survei Indonesia (LSI DENNY JA) (2005-present)
Professional Certification	Certified Risk Professional (CRP), Indonesian Professional Certification Authority (BNSP), IRBA Capital Market Professional Certification Institute (2025)
Concurrent Positions	**Within PHE:** • Chairman of Nomination and Remuneration Committee (2025-present) • Chairman of the Integrated Governance Committee (2025-present) • Member of Investment & Risk Management Committee (2025-present)
	Outside PHE: Executive Director, Indonesian Survey Circle (LSI DENNY JA) (2005-present)
Affiliation	Has no affiliated relationship with fellow members of the Board of Commissioners, members of the Board of Directors, or the shareholders.

Muhammad Indra Budiman

Independent Commissioner

Terms of Office: January 9, 2026 to present, 1st term

Age: 48 years old

Domicile: West Jakarta, DKI Jakarta

Citizenship: Indonesia

Educational Background	• (S2) Master in Science of Political Communication, Mercu Buana University (2014) • (S1) Bachelor in Science of Communication, Mercu Buana University (2002)
Employment History	• Commissioner of Bomba Group (2023 - present) • CEO Republik Merdeka Online (RMOL) Network (2023 - present) • Director of PT Golden Blossom Sumatra (2023 - present) • Director of PT Laras Karya Kahuripan (2022 - present) • Commissioner of R17 Group (2019 - present)
Professional Certification	None
Concurrent Positions	**Within PHE:** • Chairman of Audit Committee (2026 - present) • Vice Chairman I of Integrated Governance • Committee (2025 - Present) **Outside PHE:** • Commissioner of Bomba Group (2023 - present)
Affiliation	Has no affiliated relationship with fellow members of the Board of Commissioners, members of the Board of Directors, or the shareholders.

Nanang Untung

Commissioner

Terms of Office: May 15, 2023 to present, 2nd term

Age: 68 years old

Domicile: South Tangerang, Banten

Citizenship: Indonesia

Educational Background	Bachelor of Chemical Engineering from Institut Teknologi Bandung (1982)
Employment History	• Expert Staff to Minister of Energy and Mineral Resources for Oil and Gas Integration, Coordination, and Interface, Ministry of Energy and Mineral Resources of the Republic of Indonesia (2019-2024) • Director, PT Rinder Energia Energy Consultant (2018-2019) • CEO, PT Patra Badak Arun Solusi (2014-2017) • CEO, PT Badak NGL (2012-2014) • Senior VP Gas, PT Pertamina (Persero) (2011-2012)
Professional Certification	Certified Risk Professional (CRP), Indonesian Professional Certification Authority (BNSP), IRBA Capital Market Professional Certification Institute (2024)
Concurrent Positions	**Within PHE:** • Chairman of Investment & Risk Management Committee (2020-present) • Vice Chairman II of Integrated Governance Committee (2024-present)
	Outside PHE: None
Affiliation	Has no affiliation with members of the Board of Commissioners, members of the Board of Directors, or shareholders.

Stella Christie

Commissioner

Terms of Office: July 4, 2025 to present, 1st term

Age: 47 years old

Domicile: DKI Jakarta

Citizenship: Indonesia

Educational Background	• Doctor of Cognitive Psychology (Ph.D), Northwestern University, United States (2010) • Bachelor of Psychology (BA), Harvard University, United States (2004)
Employment History	• Vice Minister, Ministry of Higher Education, Science, and Technology of the Republic of Indonesia (2024-present) • Special Advisor to Coordinating Minister for Maritime Affairs and Investment for Human Resource Development, Indonesia (2024) • Professor, Tsinghua University, China (2022-present). • Associate Professor (with tenure), Tsinghua University, China (2018-2022). • Associate Professor (with tenure), Swarthmore College, United States (2018-2021). • Assistant Professor, Swarthmore College, United States (2012-2018). • Visiting Scholar, Stanford University, United States (2015-2016). • Postdoctoral Researcher, University of British Columbia, Canada (2010-2012)
Professional Certification	Certified Risk Professional (CRP), Indonesian Professional Certification Authority (BNSP), IRBA Capital Market Professional Certification Institute (2025)
Concurrent Positions	**Within PHE:** • Member of Nomination and Remuneration Committee (2025-present) • Member of Investment & Risk Management Committee (2025-present)
	Outside PHE: • Vice Minister, Ministry of Higher Education, Science, and Technology, Indonesia (2024-present) • Professor, Tsinghua University, China (2022-present)
Affiliation	Has no affiliated relationship with fellow members of the Board of Commissioners, members of the Board of Directors, or the shareholders. However, she is affiliated with the Government of the Republic of Indonesia, as the ultimate owner of the Company, through her concurrent position at the Ministry of Higher Education, Science, and Technology.

Wahyu Setyawan

Commissioner

Terms of Office: July 4, 2025 to present, 1st term

Age: 51 years old

Domicile: DKI Jakarta

Citizenship: Indonesia

Educational Background	• Master of Management PPM Management (2023) • Master of Laws Niigata University, Japan (2008) • Bachelor of Laws from Universitas Brawijaya (1998)
Employment History	• Deputy for Human Resources and Sustainability BP BUMN (February 2026 - present). • Acting Deputy for Legal Affairs and Legislation, Ministry of State-Owned Enterprises (2025-2026) • Commissioner, PT Bahana Pembinaan Usaha Indonesia (Persero) (2024-2025) • Expert Staff for Strategic Policy Implementation, Ministry of State-Owned Enterprises (2023-2026) • Assistant Deputy for Legislation, Ministry of State-Owned Enterprises (2020-2023) • Commissioner, PT Pertamina Gas (2019-2024)
Professional Certification	Certified Risk Professional (CRP), Indonesian Professional Certification Authority (BNSP), IRBA Capital Market Professional Certification Institute (2024)
Concurrent Positions	**Within PHE:** Member of Investment and Risk Management Committee (2025 - present)
	Outside PHE: Deputy for Human Resources and Sustainability BP BUMN (February 2026 - present)
Affiliation	Has no affiliated relationship with fellow members of the Board of Commissioners, members of the Board of Directors, or the shareholders. However, he is affiliated with the Government of the Republic of Indonesia, as the ultimate owner of the Company, through his concurrent position at the Ministry of State-Owned Enterprises.

Andika Pandu Puragabaya

Commissioner

Terms of Office: July 4, 2025 to present, 1st term

Age: 40 years

Domicile: South Jakarta, DKI Jakarta

Citizenship: Indonesia

Educational Background	• Doctor of Leadership and Policy Innovation, Universitas Gadjah Mada (2023) • Master of National Resilience, Universitas Gadjah Mada (2011) • Master of Science in Social Psychology, Universitas Indonesia (2011) • Bachelor of Psychology, Universitas Indonesia (2009)
Employment History	• Member of People's House of Representatives of the Republic of Indonesia, Commission 2 in charge of Domestic Government, Land Affairs, and Empowerment of Apparatus (2019-2024) • Member of People's House of Representatives of the Republic of Indonesia, Commission 1 in charge of Defense, Foreign Affairs, Communication and Information, and Intelligence (2014-2019)
Professional Certification	Certified Risk Professional (CRP) National Professional Certification Agency (BNSP), Capital Market Professional Certification Institute IRBA (2025)
Concurrent Positions	**Within PHE:** Member of Nomination and Remuneration Committee (2025-present)
	Outside PHE: None
Affiliation	Has no affiliated relationship with fellow members of the Board of Commissioners, members of the Board of Directors, or the shareholders.

Nepos MT. Pakpahan

Commissioner

Terms of Office: July 4, 2025 to present, 1st term

Age: 62 years old

Domicile: Banten

Citizenship: Indonesia

Educational Background	• Master of Business Administration in Engineering, Universitas Jenderal Soedirman (2001) • Bachelor of Mechanical Engineering, Universitas Brawijaya (1989)
Employment History	• Commissioner, PT Pertamina Energy Terminal (2024-2025) • President Director, PT Pertamina Trans Kontinental (2019-2023) • VP HSSE Upstream, PT Pertamina (Persero) (2017-2019) • HSSE Upstream & Gas Manager, PT Pertamina (Persero) (2015-2017)
Professional Certification	Certified Risk Professional (CRP), Indonesian Professional Certification Authority (BNSP), IRBA Capital Market Professional Certification Institute (2025)
Concurrent Positions	**Within PHE:** Member of Audit Committee (2025-present)
	Outside PHE: None
Affiliation	Has no affiliated relationship with fellow members of the Board of Commissioners, members of the Board of Directors, or the shareholders.

Board of Directors Profile

Sunaryanto

Chief Executive Officer (CEO)

Terms of Office: July 7, 2026 to present, 1st term

Age: 60 years old

Domicile: DKI Jakarta

Citizenship: Indonesia

Educational Background	Bachelor of Mechanical Engineering, Universitas Indonesia (1991)
Employment History	• President Director, PT Pertamina Hulu Indonesia – Regional 3 Kalimantan (2024-2026) • VP Drilling & Well Intervention, PT Pertamina Hulu Energi (2020-2024) • Act. General Manager, PT Pertamina Hulu Mahakam (2020) • Executive VP Operations East Kalimantan, PT Pertamina Hulu Mahakam (2018 – 2020)
Professional Certification	None
Concurrent Positions	**Within PHE:** None
	Outside PHE: None
Affiliation	Has no affiliation with any member of the Board of Commissioners, any member of the Board of Directors or with Shareholders or with the Indonesian Government as the ultimate owner entity of PHE.

Virano Gazi Nasution

Deputy Chief Executive Officer (CEO)

Terms of Office: July 7, 2026 to present, 1st period

Age: 58 years old

Domicile: DKI Jakarta

Citizenship: Indonesia

Educational Background	• Master of Energy Economic & Management, Stanford University (1993) • Bachelor of Systems Engineering, University of Arizona (1991)
Employment History	• President Commissioner, PT Pertamina Hulu Rokan – Regional 1 Sumatera (2023 – 2025) • President Commissioner, PT Pertamina EP – Regional 2 Jawa (2020-2023) • Commissioner, Ativirya Group (2016-Sekarang) • Independent Commissioner, PT Telekomunikasi Indonesia Tbk (2012-2015) • Special Advisor to the Coordinating Minister, Coordinating Ministry of Economic Affairs (2012-2014) • Council Member, National Council for Information Technology and Communication DETIKNAS (2013-Sekarang) • Director-Chief Commercial and Business Development Officer, PT Indonesia Comnets Plus (2009-2012) • Special Advisor to the Minister, Ministry of Communication and Information Technology (2008-2009) • CEO-Chairman of Board of Commissioners, Bakrie Telekom Tbk (2001-2005)
Professional Certification	• Enterprise Risk Management Training for CRP Certification, Badan Nasional Sertifikasi Profesi (BNSP) (2024) • Qualified Risk Governance Professional (QRGP), Mitra Kalyana Sejahtera (2023)
Concurrent Positions	**Within PHE:** None
	Outside PHE: Commissioner, Ativirya Group (2016-Present)
Affiliation	Has no affiliation with any member of the Board of Commissioners, any member of the Board of Directors, or with Shareholders or with the Indonesian Government as the ultimate owner entity of PHE.

Rachmat Hidajat

Director of Development & Production

Terms of Office: July 7, 2026 to present, 1st period

Age: 55 years old

Domicile: DKI Jakarta

Citizenship: Indonesia

Educational Background	• Master of Management, Institut Teknologi Bandung (2006) • Bachelor of Petroleum Engineering, Institut Teknologi Bandung (1995)
Employment History	• President Director, PT Pertamina EP – Regional 2 Jawa (2025-2026) • Director of Strategic Planning and Business Development, PT Pertamina Hulu Energi (2024-2025) • Director of Exploration & Development, PT Pertamina Geothermal Energy (2022-2024) • VP Upstream Business Development & Portfolio, PT Pertamina (Persero) (2020-2022) • VP Upstream Business Growth, PT Pertamina (Persero) (2018–2020) • VP Technical Support, PT Pertamina EP Cepu (2016-2018)
Professional Certificate	Certified Risk Professional (CRP), Indonesian Professional Certification Authority (2024)
Concurrent Positions	**Within PHE:** None
	Outside PHE: None
Affiliation	Has no affiliated relationship with members of the Board of Commissioners, fellow members of the Board of Directors, or the shareholders.

Asep Samsul Arifin

Director of Exploration

Terms of Office: July 7, 2026 - present, 1st term

Age: 52 years old

Domicile: Bogor, West Java

Citizenship: Indonesia

Educational Background	• Master of Business Administration, Institut Teknologi Bandung (2006) • Bachelor of Geophysics Engineering, Institut Teknologi Bandung (1998)
Employment History	• VP Upstream Business Planning & Portfolio Management, PT Pertamina Hulu Energi (2024 – 2026) • VP Portfolio & Performance Management PT Pertamina (Persero) (2024 – 2024) • VP Upstream Business Development & Portfolio PT Pertamina (Persero) (2022 – 2023) • VP Portfolio Co. Business Development & Portfolio PT Pertamina (Persero) (2021 – 2022) • VP Strategic Planning & Risk Management PT Pertamina (Persero) (2019 – 2021) • Corp Head Upstream Investment Review PT Pertamina (Persero) (2018 – 2019) • Manager Upstream Investment Review PT Pertamina (Persero) (2017 – 2018) • Papua Exploration Senior Manager PT Pertamina (Persero) (2017 – 2017)
Professional Certification	Occupational Health and Safety Management Systems CRP for Executive
Concurrent Positions	**Within PHE:** None
	Outside PHE: None
Affiliation	Has no affiliation with any member of the Board of Commissioners, any member of the Board of Directors, or with Shareholders or with the Indonesian Government as the ultimate owner entity of PHE.

Mery Luciawaty

Director of Strategic Planning, Portfolio & Commercial

Terms of Office: May 15, 2024 to present, 1st term

Age: 53 years old

Domicile: DKI Jakarta

Citizenship: Indonesia

Educational Background	• Master of Petroleum Engineering, University of Tulsa, Oklahoma, United States (2002) • Master of Management, Universitas Indonesia (2000) • Bachelor of Gas and Petrochemical Engineering, Universitas Indonesia (1997)

Independence of Directors

The Board of Directors of PT Pertamina Hulu Energi (PHE) is not considered independent from management because the duties, functions, and authorities inherent to the Board are directly related to the management of the company's day-to-day operations. The Board bears full responsibility for strategic and operational decision-making, as well as for carrying out oversight and internal control functions within the scope of management. This is also stipulated in the Company's Articles of Association, Article 12 "Duties, Authority, and Obligations of the Board of Directors," paragraphs 1–2, points a–h.

However, it is important to note that, overall, the Board of Directors of PT Pertamina Hulu Energi (PHE), in principle, maintains its independence from other external interests. This is demonstrated by the fact that no member of the Board of Directors has any affiliation, special relationship, or direct connection with the government or other external entities that could give rise to a conflict of interest, in accordance with the Company's Articles of Association, Article 11 "The Board of Directors," paragraphs 24, points a–e. The PHE Board of Directors signed a Conflict of Interest letter, stating that the individuals in question have no family members or friends who hold direct or indirect economic interests in companies or organizations currently doing business with Pertamina.

Financial Audit

The Board of Commissioners, based on Letter No. 066/DK-PHE-2025-S0 dated October 4 2025, has granted approval/recommendation regarding the Scope of Audit Engagement and Service Fees for the General Audit of the Consolidated Financial Statements of the Company and its Subsidiaries within the Subholding Upstream for Fiscal Year 2025. The public accountants who have audited the Company's financial statements for 6 (six) consecutive fiscal years, from fiscal year 2020 through 2025, are listed in the table below.

Fiscal Year	Public Accountant Firm	Public Accountant	Opinion on Financial Report	Audit Service Value (Rp billion)
2025	Purwanto Susanti dan Surja (Ernst & Young/EY Indonesia) Registrasi KMK: 69/MK/SK/2025	Widya Arijanti No. Reg: AP.0702	Fair, in All Material Respects	10.37
2024	Purwantono, Sungkoro & Surja (Ernst & Young) No. Reg. KMK: 603/KM.1/2015	Irwan Haswir AP.1726	Fair, in All Material Respects	8.20
2023	Purwantono, Sungkoro & Surja (Ernst & Young) No. Reg. KMK: 603/KM.1/2015	Irwan Haswir AP.1726	Fair, in All Material Respects	7.15
2022	Purwantono, Sungkoro & Surja (Ernst & Young) No. Reg. KMK: 603/KM.1/2015	Irwan Haswir AP.1726	Fair, in All Material Respects	5.63
2021	Purwantono, Sungkoro & Surja (Ernst & Young) No. Reg. KMK: 603/KM.1/2015	Irwan Haswir AP.1726	Fair, in All Material Respects	6.59

Remuneration of Directors and Commissioners

Remuneration structure for Board of Commissioners and Board of Directors is shown in the table below.

Board of Commissioners	Board of Directors
Income	
Honorarium for President Commissioner: 45% of the Salary of the President Director	President Director Salary: 100%
Honorarium for Other Commissioners: 90% of the Honorarium for the President Commissioner	Salary of Other Directors: 85% of the Salary of President Director
Allowance	
Religious Holidays	Religious Holidays
Transportation	Housing Area
Post-Employment Insurance	Post-Employment Insurance
Facility	
Health	Health
Legal Aid	Legal Aid
Communication and Information Technology Facilities	Communication and Information Technology Facilities
Uniform/Suit	Uniform/Suit
Membership of Professional Associations	Membership of Professional Associations
Others	Club/Corporate Membership
	Official Vehicles
	Others

Tax on the honoraria and allowances of the Board of Directors and the Board of Commissioners is borne by the Company. Performance incentives for the Board of Directors and the Board of Commissioners are granted in accordance with the provisions of the General Meeting of Shareholders (GMS) or the Circular Resolution of Shareholder (KPSSS), on a gross basis (with tax borne by each member of the Board of Commissioners and the Board of Directors).

The company may adjust payments (deferral of payment, reduction in the deferred amount, or non-payment) of deferred performance bonuses or incentives, or reclaim performance bonuses that have already been paid (clawback) should the conditions set out by the shareholders in the KPSSS arise.

As of the end of 2025, the Company did not have a long-term compensation policy for the Board of Commissioners, Board of Directors, or employees. The Company also does not implement a Management Stock Ownership Program (MSOP) and/or an Employee Stock Ownership Program (ESOP). There are no members of the Board of Commissioners or Board of Directors who own shares in the Company.

ESG-Linked Incentives

Under the Board of Directors' remuneration policy, sustainability performance indicators relating to the management of the impact of the Company's operational activities are one of the key factors influencing the amount of the variable bonus. Some of the sustainability achievements taken into account include a 30% reduction in the Company's emissions, the Total Recorded Incident Rate (TRIR), the number of accidents, and gender and generational diversity, particularly the increased involvement of women and millennials within the organisation. Other indicators include the implementation of the code of ethics, the prevention of conflicts of interest, the reporting of public officials' assets (LHKPN), and the effectiveness of risk management.

Related Party Transactions

Transactions with related parties have been consolidated in the 2025 Financial Statements. Some of these items are summarised in the table below.

Component	Value (Thousand USD)
Cash and cash equivalents	2,788,198
Restricted cash	2,396,125
Total trade receivables	1,746,008
Other receivables	9,249
Trade receivables - related parties	25,255
Other receivables - related parties	45,326
Trade payables - related parties	299,218
Other payables - related parties	120,426
Revenues - related parties	11,122,636
Shareholder loans to PT Pertamina (Persero)	73,847
Interest expense of shareholder loans to PT Pertamina (Persero)	6,709
Key management personnel compensation	4,064

3.2 Corporate Behavior

Guidelines on Business Conduct and Ethics (Code of Ethics)

PHE implements the Code of Conduct (COC) No. A13-005/PHE01000/2023-S9 dated 10th of April 2023, as the Company's Code of Ethics applicable to all employees of PHE, its subsidiaries and affiliates, as the basis for their actions and conduct. The Code of Ethics has been drawn up in accordance with best practices in corporate governance, including the principles of prudence and respect for human rights. In carrying out their duties, all PHE personnel—namely the Board of Directors, the Board of Commissioners, fixed-term employees, permanent employees, and support staff working within the PHE environment—are required to comply with the Code of Conduct and Business Ethics (CoC). The Code of Conduct and Business Ethics also serves as a guide for various parties:

1. External parties acting for and on behalf of the Company.
2. Subsidiaries and their subordinate corporate structures, namely other legal entities or businesses controlled by PHE, whether directly or indirectly.
3. Business partners, vendors and contractors, including security service providers.

The commitment to implementing the CoC is stated in the Statement of Compliance which must be renewed annually by PHE workers and leaders through the online compliance system. In addition to completing the compliance statement, every PHE employee is responsible for:

- Reading, understanding, and implementing the CoC.
- Reporting any actions that are inconsistent with the law or other Company regulations.

In addition to completing the compliance statement, the responsibilities of a PHE leader include:

- Reading, understanding, and implementing the CoC.
- Reporting any actions that do not comply with the law and other Company regulations.
- Serving as a role model for employees within their area.
- Providing protection for employees who submit reports.

PHE has signed the UN Global Compact and is committed to upholding its ten principles regarding human rights, labor standards, environmental sustainability, and anti-corruption. PHE is also committed to reporting annually on the progress of implementing these principles, in accordance with the UN Global Compact's Communication on Progress (COP) policy.

Anti-Corruption Policy

PHE Subholding Upstream's commitment to anti-bribery is demonstrated through a number of initiatives, including:

1. The implementation of an Anti-Bribery Management System (ABMS) based on ISO 37001.
2. Implementation of the Anti-Bribery Management System Guidelines No. A12-001/ PHE01000/2022-S9, First Revision.
3. An Anti-Bribery Management Declaration signed by the entire Board of Directors.
4. An Anti-Bribery Policy signed by the Chief Executive Officer.
5. The obligation to report to LHKPN.
6. Obligation to report gratuities.
7. Obligation to complete a declaration of conflict of interest.
8. Obligation to complete a declaration of code of conduct.

The Company is committed to conducting ethical and clean business practices, namely by:

1. Applying Zero Tolerance principle towards all forms of bribery in the business environment and activities, including the Company's business partners.
2. Always complying with the applicable anti-bribery laws and regulations, and conducting compliance evaluations on their implementation.
3. Developing, implementing and meeting the requirements of an Anti-Bribery Management System to achieve the organization's anti-bribery objectives.
4. Encouraging every person to participate in whistle-blowing in good faith and based on a reasonable belief against any bribery or potential bribery and ensuring that there will be no retaliation against the whistle-blower.
5. Making continuous improvement and evaluation on the Anti-Bribery Management System to ensure that the policy remains relevant and in line with the Company's objectives.
6. Establishing an Anti-Bribery Compliance Function equipped with the responsibility and authority to ensure the effective implementation of the Anti-Bribery Management System in achieving the set targets.
7. Ensuring that sanctions are imposed for any violation of the Anti-Bribery Management System policy in accordance with the company regulations and/or the applicable laws and regulations.

In addition to internal company requirements, all suppliers are required to comply with the Company's anti-corruption and anti-bribery policies. This obligation is formally set out in the General Terms and Conditions of Contract, specifically Article 23. Suppliers and external contractors are required to sign a tender participant declaration, which includes clause 7 regarding their willingness to undergo compliance audits in relation to the Corruption Crimes Act, the Foreign Corrupt Practices Act (FCPA), and/or the Anti -Bribery and Corruption (ABC) Act, by an independent auditor appointed by the Company, based on both physical (hardcopy) and digital data.

The Company has also drawn up Guidelines on the Control of Gratuities, a Management Declaration on Anti-Bribery, an Integrity Pact, and Guidelines on the Reporting of Public Officials' Assets (LHKPN). The Guidelines on the Control of Gratuities outline the types of gratuities that may be accepted by the Company, including official awards from the government. Any gratuity received must be reported online via the Compliance Online System (Compols), thereby making it easier for PHE staff to submit reports relating to the compliance reporting programme, particularly gratuity reports. During 2025, there were no reports regarding the receipt of gratuities.

The Management Declaration on Anti-Bribery was signed by the Board of Directors and the Board of Commissioners; the Code of Conduct Declaration was signed by all levels of management and staff; and the Integrity Pact was signed by business partners, vendors and suppliers involved in the Company's operational activities. In accordance with the Guidelines on Asset Declarations for Public Officials (LHKPN), the Company has designated officials within the Subholding Upstream who are obliged to submit LHKPN declarations; by the end of 2025, 685 PHE officials had submitted their LHKPN declarations, representing 100% of the total 685 required to report.

We have conducted a Bribery Risk Assessment for all, or 100%, of our operational activities and business processes, to assess the potential risk of corrupt practices. Based on the results of the assessments carried out by the respective internal functions, PHE has identified 33 risk events relating to the potential for or risk of bribery. According to the whistleblowing system (WBS), no proven acts of bribery were identified at PHE throughout 2025. The Company actively conducts awareness-raising sessions for all PHE personnel to strengthen the anti-corruption culture. These sessions aim to instill the values of integrity, so that an anti-corruption mindset becomes an integral part of a sustainable work culture. Throughout 2025, the Company has communicated its anti-corruption policies and procedures to all members of the Board of Commissioners and the Board of Directors, Company officials, and business partners, as part of Vendor Day.

Anti-Corruption Training

In 2025, annual mandatory training with the topic of Subholding Upstream Anti-Bribery Management System (SMAP) was delivered to all employees, including Fixed-Term Employees (PWT) and Permanent Employees (PKWTT), via the Learning Management System. PHE conducted a range of training and awareness-raising sessions for its functions and external stakeholders, both in-person and online. Meanwhile, 100% of PHE's contractors are subject to the SMAP policy during the procurement process. A clause regarding compliance with the SMAP policy is included in the procurement contract and is reiterated at the kick-off meeting. Furthermore, the 2025 Anti-Bribery Management System Implementation, Compliance and Internal Audit Team, established by Order No. Print-013/PHE00000/2025-S0 dated 17 March 2025, has also undergone specific training on the Anti-Bribery Management System and Internal Audit of the Anti-Bribery Management System. Participation in anticorruption training is shown in the table below.

Participant Job Level	Total	Number of Participants	Percentage
Board of Commissioner	13	13	100%
Director	8	8	100%
Vice President	23	23	100%
Manager, Senior Manager, and Expert	186	163	87.63%
Assistant Manager / Equivalent (including Senior Staff)	455	433	95.16%
Staff and Junior Staff	246	106	43.09%
Total	**931**	**746**	**80.13%**

Whistleblowing System

In accordance with the Interim Policy on the Management of the Whistleblowing System (WBS) as set out in the Memorandum from the Chief Audit Executive of PT Pertamina (Persero) No. 200/J00000/2025-S0 dated 28 November 2025, the management of the WBS is carried out centrally by the Internal Audit Unit of PT Pertamina (Persero) with the support of PHE Subholding Upstream's Internal Audit function as needed. The WBS-Internal Audit function at PT Pertamina (Persero) is responsible for following up on reports and submitting the investigation findings to the President Director of PT Pertamina (Persero). The Company will impose sanctions on anyone who breaches the Company's policies such as CoC, SMAP, Code of Corporate Governance, Conflict of Interest, Board Manual, Charter, Integrity Pact, and Work Procedure System. For every substantiated report, management will follow up with guidance, sanctions, disciplinary action, corrective measures and preventative measures, which must be implemented by the immediate supervisor. The party reported for alleged deviations or breaches is granted the right to defend themselves, and their defence will be heard by the Board of Directors.

Pertamina has established a policy to protect whistleblowers through a Decree on the Protection Policy for Reporters of Alleged Violations of Good Corporate Governance Principles. If the whistleblower is an internal party of the Company, they shall be protected against:

1) Unfair dismissal
2) Demotion of position or class
3) Harassment or discrimination in any form
4) Adverse entries in their personnel file record
5) Other detrimental treatment

If the whistleblower is an external party to the Company, they shall be protected against:

1) Discrimination in business dealings
2) Discrimination in the provision of services

Protection against detrimental treatment is also afforded to justice collaborators. Should the whistleblower require it, the Company may assist in facilitating protection through the Witness and Victim Protection Agency (LPSK).

Protection for the reported party and relevant stakeholders is set out in the Interim Policy on the Management of the WBS. Protection for the reported party is as follows:

1) The principle of presumption of innocence applies.
2) The respondent must not be treated as guilty before a valid investigation outcome is reached.
3) The respondent's identity is kept confidential throughout the handling process.
4) Preliminary measures must be treated as preventive steps, not as punishment.
5) The respondent has the right to provide clarification and evidence during the investigation.

For other relevant stakeholders, the Company provides protection by:

1) Maintaining the confidentiality of identities during the handling process.
2) Protecting against discrimination and harm (to safety, health, psychological well-being, and career).

The WBS is accessible by all stakeholders. Reporting channels are available in two languages, Indonesian and English.

During 2025, a total of 139 reports of critical issues relating to PHE were recorded and received by the WBS Function – Internal Audit at PT Pertamina (Persero). The total number of reports for the 2020–2025 reporting period was 486. These reports were followed up as detailed below:

1. Reports at the initial analysis stage: 127 complaints;
2. Reports on the investigation waiting list: 10 complaints;
3. Reports under handling/investigation by the Supervisory Function: 60 complaints;
4. Reports that have been fully resolved (closed): 289.

Anti-Corruption Audit

The company is strongly committed to preventing fraud, gratification and bribery, which is achieved by implementing an Anti-Bribery Management System (SMAP) in accordance with the SNI ISO 37001 standard, as a guideline for all PHE subsidiaries. By the end of 2025, 8 subsidiaries had obtained ISO 37001:2016 SMAP certification, covering all operational functions.

ISO 37001:2016
Anti-Bribery Management System

Publisher:
- TÜV NORD
- MUTU International
- SGS
- British Standards Institution (BSI)

Validity Period:
3 Years

The SMAP process is divided into 3 main stages that form a cycle as follows.

Prevention	Detection	Response
• Corporate values and code of ethics • Bribery risk assessment • Awareness and training • Policies, systems and procedures • Compliance communication • Declarations/integrity pledges • Due diligence • Support and advisory functions • Rewards and punishment	• Individual and environment control • Monitoring and review • Checking and verification • Clarification and data analysis • Reporting of breaches (WBS) • Compliance control • Assessment and inspection (audit)	• Incident/case management • Case investigation and tracking • Consequences of errors • Corrective actions • Monitoring the effectiveness of actions • Remediation

The process of SMAP audit is illustrated in the flowchart below.

Stage 1

Establishment of Guidelines and Issuance of Instructions

Establishing the SMAP Policy, SMAP Guidelines, Anti-Bribery Function (FAP) Instructions and SMAP Internal Auditor Instructions

Stage 2

Implementation of the SMAP

Continuously monitoring and updating the SMAP objectives, organisational context and bribery risk assessment.

Stage 3

Internal Audit

Internal audits are carried out across all functions through:

- The preparation of an internal audit programme and schedule approved by SMAP's Top Management
- SMAP Internal Auditors conducting cross-functional audits

Stage 4

Follow-Up

After the audit, follow-up on corrective actions regarding observations or findings are taken.

Stage 5

Management Review Meeting

Conjunction of the FAP review meeting, the SMAP Top Management review meeting, and the SMAP Steering Committee review meeting to discuss audit results, follow-up actions, the effectiveness of the SMAP, and guidance from the Steering Committee for improvement or innovation.

Stage 6

External Audit

Conduct an external audit following the SMAP Top Management and SMAP Steering Committee review meetings.

- ISO 37001 certification is carried out by a certification body once every three years
- Surveillance audits by the certification body are carried out in the two years between certifications

The implementation of SMAP involves the role of Direct Managers for ensuring that SMAP requirements are applied and met within their work units. The Anti-Bribery Function (FAP) is responsible for overseeing the design and implementation of the SMAP, providing guidance to employees, monitoring and evaluating performance, developing related working systems, and reporting on SMAP performance to the Board and Top Management. In addition, the SMAP Internal Audit Team is responsible for conducting internal audits, comparing evidence against audit criteria, making recommendations, and reporting audit results to the FAP, the Board, and Top Management.

PHE conducts management reviews at least once a year to review SMAP and ensure its implementation, adequacy and effectiveness. The output of the Top Management review will ensure that it includes decisions relating to opportunities for continuous improvement and any need for changes to the SMAP. A summary of the results of the top management review will be reported to the Steering Committee. The Steering Committee consists of the Executive Director of PHE, who has primary authority in decision-making and establishes the Anti-Bribery Compliance Function team through Decision Letter. The Steering Committee and Top Management must ensure that the SMAP mechanism operates effectively, consistently and efficiently, and is continuously improved.

Business Ethics Audit

The Company routinely monitors and evaluates the implementation of its Code of Ethics and Business Conduct Guidelines through Good Corporate Governance (GCG) assessments every year. These assessments are carried out in accordance with applicable laws and regulations and involve reviewing the Company's compliance with ethical standards, identifying areas for improvement, and ensuring alignment with best governance practices. The results and recommendations from each GCG assessment form the basis for revising and improving the Code of Ethics to reflect regulatory changes, organisational needs and evolving industry standards.

Assessments are carried out in two ways: through self-assessment or evaluation conducted by an internal team every year, and through assessment by an external assessor every 2 years. For the 2024 year book, external assessment was conducted by PT Sinergi Daya Prima (SDP). The assessment is based on the Decision of the Secretary of the Ministry of State-Owned Enterprises of the Republic of Indonesia No. SK-16/S.MBU/2012 concerning Indicators/Parameters for the Assessment and Evaluation of the Implementation of Good Corporate Governance (GCG) in State-Owned Enterprises.

Business Ethics Audit for Business Partners

The performance of suppliers, contractors, and security providers is routinely assessed through the Service Performance Review, which is carried out annually or as required. Key evaluation criteria include compliance with CoC, Health, Safety, Security and Environment (HSSE) performance, timeliness of delivery/execution, quality of work and equipment, TKDN (Domestic Component Content), and business ethics. The results of these evaluations, including compliance with anti-corruption requirements, are used as a reference for future procurement decisions. If a supplier or contractor is found to be non-compliant with the Anti-Corruption Policy or refuses to undergo a mandatory audit, the Company reserves the right to impose appropriate sanctions. In 2025, PHE has conducted audit for all suppliers, contractors, and security providers.

Significant Cases

Enforcement of the International Arbitration Award of the Court of Arbitration of the International Chamber of Commerce (ICC) No. 24866/AYZ/ELU dated 2 November 2022

The Libyan National Oil Company ("NOC") is the Claimant who filed an arbitration claim with the ICC against Pertamina E&P Libya Ltd ("PEPL") as Respondent 1 and PT Pertamina (Persero) ("Pertamina")—which acted as guarantor for PEPL—as Respondent 2, concerning the implementation of two Exploration and Production Sharing Agreements ("EPSAs") which came into effect on 10 December 2005 in Block 17-3 Sirte (Offshore) and Block 123-3 Sabratah (Onshore). NOC claims that PEPL is liable to pay a penalty for failing to fulfil the remaining minimum exploration commitment in the form of an exploration programme during the exploration period under each respective EPSA. According to the ICC award, PEPL and Pertamina, jointly and severally, were ordered to pay NOC Libya the following amounts: (i) US$24,000 plus interest at LIBOR + 1.5% per annum from 31 October 2019 until the date of payment to NOC Libya for Block 17-3; (ii) US$5,200 plus interest at LIBOR + 1.5% per annum from 31 October 2019 until the date of payment to the Libyan NOC

for Block 123-3; (iii) US$113 as arbitration costs; (iv) US$1,351 as legal costs and other expenses incurred by the Libyan NOC during the arbitration proceedings. Corporate procedures to implement the ICC award are currently underway, and PHE will assist with this process in accordance with the Company's policy.

Apart from the legal proceedings mentioned above, no members of the Board of Commissioners or the Board of Directors are involved in any material cases arising from decisions made by members of the Board of Commissioners or the Board of Directors.

Throughout 2025, PHE Subholding Upstream was involved in several tax disputes that were brought before the Tax Court. Details of the tax disputes faced can be found in note 44 of the appendix to PHE's audited Consolidated Financial Statements for the 2025 financial year, attached at the back of PHE's Annual Report 2025. The majority of existing disputes relate to differences in the interpretation of tax regulations and tax administration, and there are no disputes that could lead to criminal tax charges. PHE always endeavours to pay and report taxes in a timely manner and in accordance with existing regulations. Apart from tax matters, there were no environmental cases, industrial/labour relations cases, or other sanctions.
